From the Laboratory to the Classroom Jared Horvath,Jason Lodge,John Hattie,2016-07-22 Over recent years the field of Science of Learning has increased dramatically Unfortunately despite claims that this work will greatly impact education very little research makes it into teacher practice Although the reasons for this are varied a primary concern is the lack of a proper translation framework From the Laboratory to the Classroom aims to consolidate information from many different research disciplines and correlate learning principles with known classroom practices in order to establish explanatory foundations for successful strategies that can be implemented into the classroom

It combines theoretical research with the diverse and dynamic classroom environment to deliver original effective and specific teaching and learning strategies and address questions concerning what possible mechanisms are at play as people learn. Divided into five sections, chapters cover A Framework for Organizing and Translating Science of Learning Research, Motivation and Attention as Foundations for Student Learning, Memory and Metamemory Considerations in the Instruction of Human Beings, Science of Learning in Digital Learning Environments, Educational Approaches for Students Experiencing Learning Difficulties, and Developmental Characteristics of Gifted Children. Brain Behaviour and Classroom Practice: Forging Research Practice Relationships via Laboratory Schools. This fascinating text gathers an international team of expert scientists, teachers, and administrators to present a coherent framework for the vital translation of laboratory research for educational practice. Applying the Science of Learning framework to a number of different educational domains, it will be an essential guide for any student or researcher in education, educational psychology, neuropsychology, educational technology, and the emergent field of neuroeducation.

Transparency in Assessment – Exploring the Influence of Explicit Assessment Criteria Anders Jönsson, Frans Prins, 2019-04-03 In many schools and higher education institutions it has become common practice to share assessment criteria with students Sometimes it is required for accountability purposes at other times criteria are used as a means to communicate expectations to students However the idea that explicit assessment criteria should be shared with students has been contested On the one hand research has shown that explicit criteria may positively affect student performance reduce their anxiety as well as support students use of self regulated learning strategies On the other hand there are fears that explicit criteria may have a restraining influence on students learning as well as limiting their autonomy and creativity There are also indications of students becoming more performance oriented as opposed to learning oriented when being provided with explicit assessment criteria Taken together it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria and under which circumstances it is not In particular empirical research on the proposed negative effects of sharing criteria with learners is limited and most fears voiced in the literature are based on individual experiences and anecdotal evidence In this book we therefore bring different perspectives on transparency in assessment together in order to further our understanding of how students are influenced by the use of explicit assessment criteria A deeper understanding of the influence of explicit assessment criteria on students understanding of criteria motivation and learning is equally imperative for future research and educational practice both of which need to go beyond individual opinions and convictions
