From GCSEs to EBCs Great Britain. Parliament. House of Commons. Education Committee, 2013 The Government's plans for replacing GCSEs with new English Baccalaureate Certificates in some subjects is trying to do too much too fast Introducing several fundamental changes at the same time and to a tight timetable will jeopardise the quality of the reforms and may threaten the stability of the wider exam system GCSEs need significant improvements in order to restore public confidence in the exam system but the Government still needs to make the case that the GCSE brand is so discredited that it is beyond repair MPs are also concerned about the impact of the changes on subjects outside the English Baccalaureate where students will be taking GCSEs for some time to come according to the Government's plans The report also questions how well the Government's proposals will serve lower attaining pupils who are often the most disadvantaged There is no evidence that the proposed changes will help to tackle under achievement or narrow the attainment gap between the richest and poorest students any more effectively than GCSEs The Government is also called upon to re think its plans for a Statement of Achievement specifically for lower attaining pupils MPs agree that changes are needed to the way in which exams are run but they raise serious concerns about franchising subjects to exam boards The report is critical of the Government's decision to abolish some GCSEs before publishing the outcomes of the National Curriculum Review and its proposed changes to the school accountability system MPs also note the wide ranging stakeholder opposition to many of the Government's proposals

**Arithmetic Counts!** Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

### **Psychology and Mathematics Education**

Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of

adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity [Houston Private and Select Public Schools](#) Shelby Joe,Stephen Hayes,2013-08-09 Now in its third edition General Academic s comprehensive guide to Houston private and select public schools contains more than 300 pages of advice analysis school profiles and more Our publication should provide the basic building blocks for parents to jump start their journey in researching applying to and selecting a school for their child This third edition features profiles on 41 private and 23 select public schools in and around Houston s 610 Loop and Beltway 8 highways General Academic is an academic consulting and supplementary education company based in Houston s Rice Village it was founded in 2003 [Closing the Achievement Gap from an International Perspective](#) Julia V. Clark,2013-10-24 In a changing world that demands new skills a vital concern of public education is the gap in academic performance between low and high achieving students There is no excuse for the achievement gaps that persist among poor and minority students in schools today All students can succeed at high levels regardless of race ethnicity and economic background Several countries have successfully confronted inequities in achievement demonstrating that any school can close achievement gaps regardless of the community they serve and that all students can achieve at high levels when they are provided with the right opportunities This book is about understanding what factors selected countries have applied to promote progress and what factors contribute to progress in the closing of achievement gaps It is about creating opportunities for all students Closing the Achievement Gap from an International Perspective Transforming STEM for Effective Education is written in response to rising concern for the improvement of quality education especially in mathematics and science provided to all students The contributors take a systematic view of the subject beginning with a cross national analysis of teacher qualifications and the achievement gap that spans 50 countries The content of the book is organized in sections describing education around the globe North and South America Europe Asia Africa and Australia Individual chapters offer close up analysis of efforts to close achievement gaps in the U S and Canada Mexico England Turkey China South Africa and Australia among many others The contributors provide information on the achievement gap in mathematics and science review current research and present strategies for fostering improvement and raising performance with a focus on school related variables that adversely affect educational outcomes among poor and minority students The authors of the various chapters looked at how students data correlated with classroom practices teacher instruction and academic programming as part of their efforts to measure student growth

Qualitative and quantitative data are provided to provide evidence not only of the problem but also for the solution The book concludes with a chapter on promoting equality and equity to shrink the achievement gap worldwide State, Foreign Operations, and Related Programs Appropriations for 2011: Foreign operations fiscal year 2011 budget justification United States. Salomone, 2022 A sweeping account of the global rise of English and the high stakes politics of language Spoken by a quarter of the world's population English is today's lingua franca its common tongue The language of business popular media and international politics English has become commodified for its economic value and increasingly detached from any particular nation This meteoric rise of English has many obvious benefits to communication Tourists can travel abroad with greater ease Political leaders can directly engage their counterparts Researchers can collaborate with foreign colleagues Business interests can flourish in the global economy But the rise of English has very real downsides as well In Europe imperatives of political integration and job mobility compete with pride in national language and heritage In the United States and England English isolates us from the cultural and economic benefits of speaking other languages And in countries like India South Africa Morocco and Rwanda it has stratified society along lines of English proficiency In *The Rise of English* Rosemary Salomone offers a commanding view of the unprecedented spread of English and the far reaching effects it has on global and local politics economics media education and business From the inner workings of the European Union to linguistic battles over influence in Africa Salomone draws on a wealth of research to tell the complex story of English and ultimately to argue for English not as a force for domination but as a core component of multilingualism and the transcendence of linguistic and cultural borders
