Maths Amesa Question Papers:

Mathematical Knowledge in Teaching Tim Rowland,Kenneth Ruthven,2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in Mathematical Knowledge in Teaching are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching

History of Mathematics in Africa: 1986-1999 Paulus Gerdes,Ahmed Djebbar,2011 **Mathematics Teacher Education** A.J. Dawson,Barbara Jaworski,Terry Wood,2003-09-02 Currently there is substantial exchange and communication between academic communities around the world as researchers endeavour to discover why so many children fail at a subject that society deems crucial for future economic survival This book charts current thinking and trends in teacher education around the world and looks critically at the inservice education of maths teachers The contributors explore the processes practices and issues in teacher education projects in ten countries and these are then discussed and related to current philosophies of teacher education The book provides an insight into the successes and shortcomings of many different approaches to maths education **Researching Possibilities in Mathematics, Science and Technology Education** Mamokgethi Setati,2009 Mathematics Science and Technology Education MSTE emerged as a research discipline in the 1960s and continues to reflect the distinctive flavour and character of its roots in Western societies and science In this mode often based on positivist frameworks research environments are characterised by idealised environments sanitised research conditions depoliticised neutralised data and contested analyses The book arises from needs in the mathematics and science education research community in Southern Africa for a methodology text that is responsive to rapidly changing educational environments and to the challenges and possibilities of research in contexts characterised by inequality diversity poverty violence the particular history within which research takes place and the consequent ethical and socio political considerations The book also acknowledges and works with the practical and political realities of education and schooling in much of Southern Africa where schools are often poorly resourced and communication with them is often difficult and where research methodologies and ethics have to take account of the complexities of school operations and school community relationships The book does not aim to position itself as a counterpoint to conventional research methodologies It aims to build on the established base of mainstream MSTE and seeks to elevate and widen the debates raise methodological issues

and offer innovative possibilities and pedagogies To this end the chapters present theoretical meta level reflections on issues in research design in the fields of mathematics science and technology education In this shift of focus the book draws on a number of fairly recent research approaches These include ethno mathematics cultural studies in science education place based education community based education environmental education socially critical theory and education for social and economic development   *For the Learning of Mathematics* ,2003   **Collaboration in Teacher Education** Andrea Peter-Koop,Vânia Santos-Wagner,C.J. Breen,A.J.C Begg,2013-03-09 This book systematically explores and reflects on a variety of issues related to collaborative mathematics teacher education practice and research such as classroom coaching mentoring or co learning agreements highlighting the evolution and implications of collaborative enterprises in different cultural settings It is relevant to educational researchers research students and practitioners   Exploring Mathematics and Science Teachers' Knowledge Hamsa Venkat,Marissa Rollnick,John Loughran,Mike Askew,2014-05-09 Globally mathematics and science education faces three crucial challenges an increasing need for mathematics and science graduates a declining enrolment of school graduates into university studies in these disciplines and the varying quality of school teaching in these areas Alongside these challenges internationally more and more non specialists are teaching mathematics and science at both primary and secondary levels and research evidence has revealed how gaps and limitations in teachers content understandings can lead to classroom practices that present barriers to students learning This book addresses these issues by investigating how teachers content knowledge interacts with their pedagogies across diverse contexts and perspectives This knowledge practice nexus is examined across mathematics and science teaching traversing schooling phases and countries with an emphasis on contexts of disadvantage These features push the boundaries of research into teachers content knowledge The book s combination of mathematics and science enriches each discipline for the reader and contributes to our understandings of student attainment by examining the nature of specialised content knowledge needed for competent teaching within and across the two domains Exploring Mathematics and Science Teachers Knowledge will be key reading for researchers doctoral students and postgraduates with a focus on Mathematics Science and teacher knowledge research   **South African national bibliography** ,1995   **Science Citation Index** ,1992 Vols for 1964 have guides and journal lists   *General Catalogue of Printed Books to 1955* British Museum.
