Grams,2021-09-14 During the 1930s Germany's industrialization rearmament and economic plans taxed the existing manpower forcing the country to explore new ways of acquiring Aryan German labor Eventually the Third Reich implemented a return migration program which used various recruitment strategies to entice Germans from Canada and the United States to migrate home It initially used the Atlantic Ocean to transport German speakers but after the outbreak of World War II German civilians were brought from the Americas to East Asia and then to Germany via the Trans Siberian Railway through the Soviet Union Germany's attack on the Soviet Union in June 1941 ended this overland route but some Germans were moved on Nazi ships from East Asia to the Third Reich until the end of 1942 This book investigates why Germans who had already established themselves in overseas countries chose to migrate back to an oppressive and authoritarian country It sheds light on some aspects of the Third Reich's administration goals and achievements associated with return migration while also telling the individual stories of returnees **The Journal of Education** ,1882

*Topological Automorphic Forms* Mark Behrens,Tyler Lawson,2010-02-22 The authors apply a theorem of J Lurie to produce cohomology theories associated to certain Shimura varieties of type U 1 n 1 These cohomology theories of topological automorphic forms mathit TAF are related to Shimura varieties in the same way that mathit TMF is related to the moduli space of elliptic curves *Dynamics: Topology and Numbers* Pieter Moree,Anke Pohl,L'ubomír Snoha,Tom Ward,2020-02-12 This volume contains the proceedings of the conference Dynamics Topology and Numbers held from July 2 6 2018 at the Max Planck Institute for Mathematics Bonn Germany The papers cover diverse fields of mathematics with a unifying theme of relation to dynamical systems These include arithmetic geometry flat geometry complex dynamics graph theory relations to number theory and topological dynamics The volume is dedicated to the memory of Sergiy Kolyada and

also contains some personal accounts of his life and mathematics     [Shimura Varieties](#) Thomas Haines,Michael Harris,2020-02-20 This is the second volume of a series of mainly expository articles on the arithmetic theory of automorphic forms It forms a sequel to On the Stabilization of the Trace Formula published in 2011 The books are intended primarily for two groups of readers those interested in the structure of automorphic forms on reductive groups over number fields and specifically in qualitative information on multiplicities of automorphic representations and those interested in the classification of I adic representations of Galois groups of number fields Langlands conjectures elaborate on the notion that these two problems overlap considerably These volumes present convincing evidence supporting this clearly and succinctly enough that readers can pass with minimal effort between the two points of view Over a decade s worth of progress toward the stabilization of the Arthur Selberg trace formula culminating in Ngo Bau Chau s proof of the Fundamental Lemma makes this series timely     [Mathematical Foundations of Speech and Language Processing](#) Mark Johnson,Sanjeev P.

Khudanpur,Mari Ostendorf,Roni Rosenfeld,2012-12-06 Speech and language technologies continue to grow in importance as they are used to create natural and efficient interfaces between people and machines and to automatically transcribe extract analyze and route information from high volume streams of spoken and written information The workshops on Mathematical Foundations of Speech Processing and Natural Language Modeling were held in the Fall of 2000 at the University of Minnesota s NSF sponsored Institute for Mathematics and Its Applications as part of a Mathematics in Multimedia year long program Each workshop brought together researchers in the respective technologies on the one hand and mathematicians and statisticians on the other hand for an intensive week of cross fertilization There is a long history of benefit from introducing mathematical techniques and ideas to speech and language technologies Examples include the source channel paradigm hidden Markov models decision trees exponential models and formal languages theory It is likely that new mathematical techniques or novel applications of existing techniques will once again prove pivotal for moving the field forward This volume consists of original contributions presented by participants during the two workshops Topics include language modeling prosody acoustic phonetic modeling and statistical methodology     [Cognition, Literature, and History](#) Mark J. Bruhn,Donald R. Wehrs,2013-11-26 Cognition Literature and History models the ways in which cognitive and literary studies may collaborate and thereby mutually advance It shows how understanding of underlying structures of mind can productively inform literary analysis and historical inquiry and how formal and historical analysis of distinctive literary works can reciprocally enrich our understanding of those underlying structures Applying the cognitive neuroscience of categorization emotion figurative thinking narrativity self awareness theory of mind and wayfinding to the study of literary works and genres from diverse historical periods and cultures the authors argue that literary experience proceeds from qualitatively heightens and selectively informs and even reforms our evolved and embodied capacities for thought and feeling This volume investigates and locates the complex intersections of cognition literature and history in order to advance

interdisciplinary discussion and research in poetics literary history and cognitive science     Mathematical Reviews ,2008

Watson,1996-04-11 This volume contains invited papers presented at the 16th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee 27 30 June 1995 The Dundee Conferences are important events in the numerical analysis calendar and the thirteen papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest The book is a valuable guide to the direction of current research in many areas of numerical analysis It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations with emphasis on problems in fluid dynamics It also contains contributions to research into methods of linear algebra numerical methods for optimisation problems and surface fitting

*Atti Del ... Congresso Internazionale Dei Matematici ...* ,2006    Handbook of Homotopy Theory Haynes Miller,2020-01-23 The Handbook of Homotopy Theory provides a panoramic view of an active area in mathematics that is currently seeing dramatic solutions to long standing open problems and is proving itself of increasing importance across many other mathematical disciplines The origins of the subject date back to work of Henri Poincar and Heinz Hopf in the early 20th century but it has seen enormous progress in the 21st century A highlight of this volume is an introduction to and diverse applications of the newly established foundational theory of categories The coverage is vast ranging from axiomatic to applied from foundational to computational and includes surveys of applications both geometric and algebraic The contributors are among the most active and creative researchers in the field The 22 chapters by 31 contributors are designed to address novices as well as established mathematicians interested in learning the state of the art in this field whose methods are of increasing importance in many other areas    **Marine Renewable Energy Technology and Environmental Interactions** Mark A. Shields,Andrew I.L. Payne,2014-02-12 It is now widely recognized that there is a need for long term secure and suitable sustainable forms of energy Renewable energy from the marine environment in particular renewable energy from tidal currents wave and wind can help achieve a sustainable energy future Our understanding of environmental impacts and suitable mitigation methods associated with extracting renewable energy from the marine environment is improving all the time and it is essential that we be able to distinguish between natural and anthropocentric drivers and impacts An overview of current understanding of the environmental implications of marine renewable energy technology is provided

**Game Sound Technology and Player Interaction: Concepts and Developments** Grimshaw, Mark,2010-09-30 Game Sound Technology and Player Interaction Concepts and Developments researches both how game sound affects a player psychologically emotionally and physiologically and how this relationship itself impacts the design of computer game sound and the development of technology This compilation also applies beyond the realm of video games to other types of immersive sound such as soundscape design gambling machines emotive and fantastical sound to name a few

The application for this research is wide ranging interdisciplinary and of primary importance for academics and practitioners searching for the right sounds    **Cohomology of Vector Bundles and Syzygies** Jerzy Weyman,2003-06-09 The central theme of this book is an exposition of the geometric technique of calculating syzygies It is written from a point of view of commutative algebra and without assuming any knowledge of representation theory the calculation of syzygies of determinantal varieties is explained The starting point is a definition of Schur functors and these are discussed from both an algebraic and geometric point of view Then a chapter on various versions of Bott's Theorem leads on to a careful explanation of the technique itself based on a description of the direct image of a Koszul complex Applications to determinantal varieties follow plus there are also chapters on applications of the technique to rank varieties for symmetric and skew symmetric tensors of arbitrary degree closures of conjugacy classes of nilpotent matrices discriminants and resultants Numerous exercises are included to give the reader insight into how to apply this important method    *The Oxford Magazine*,1892
