- Earth's protective atmosphere blocks most of the sun's damaging rays.
- It has extreme temperatures.
- It has no oxygen or water to support life.
- The sun is about 8.3 billion years old.
- The sun is about 100 times the diameter of Earth.

Three versions are included. This is the completed version, which is completely filled out. Just print and send home with students.

Day & Night

Day and night occur because of the rotation of the Earth on its axis. It takes about 24 hours (or one day) for Earth to complete one full rotation.

Day

It is daytime on the side of the Earth that is facing towards the sun.

Night

It is nighttime on the side of the Earth that is facing away from the sun.

Seasons

Seasons occur because of the tilt of the Earth's axis. The part of Earth that is tilting towards the sun has more direct rays, resulting in higher temperatures and more daylight. The part of Earth that is tilting away from the sun has less direct rays, resulting in lower temperatures and less daylight. As the Earth revolves around the sun, the part of the Earth that tilts towards the sun changes throughout the year.
