

**Concept 14: Elimination**  
**Test Bank**

**MULTIPLE CHOICE**

1. A patient who was diagnosed with senile dementia has become incontinent of urine. The patient's daughter asks the nurse why this is happening. The best response by the nurse is:

|    |  |
|----|--|
| a. | "The patient is angry about the dementia diagnosis."                     |
| b. | "The patient is losing sphincter control due to the dementia."           |
| c. | "The patient forgets where the bathroom is located due to the dementia." |
| d. | "The patient wants to leave the hospital."                               |

ANS: B

Anger, wanting to leave the hospital, and forgetting where the bathroom is really have no bearing on the urinary incontinence. The patient is incontinent due to the mental ability to voluntarily control the sphincter. This is happening because of the dementia.

REF: 141

OBJ: NCLEX® Client Needs Category: Psychosocial Integrity

2. You are caring for a patient who has suffered a spinal cord injury. You are concerned about the patient's elimination status. As the nurse, your primary concern is to

|    |  |
|----|--|
| a. | Speak with the patient's family about food choices.    |
| b. | establish a bowel and bladder program for the patient. |
| c. | Speak with the patient about past elimination habits.  |
| d. | establish a bedtime ritual for the                     |
