

6.1.4 Overflow Outlet

Located on both sides of the brake, just below the centerline of the shaft and to one side is a 90 degree elbow for water overflow. This elbow should always be pointing down and be clear of any obstructions. Should the cooling water level, internal of the brake, rise to the point that water could penetrate into the shaft bearings, this overflow outlet would allow the excess water to run off. If the drains are partially blocked or piped with too much resistance to flow, the water level in the brake could rise above the shaft height and get into the bearings. In normal operation, there should never be any water coming out of these overflows. These overflows should be checked daily.
