## Eta 7750 Manual:

Recarbonizing global soils - A technical manual of recommended management practices Food and Agriculture

Organization of the United Nations, Intergovernmental Technical Panel on Soils, 2021-09-08 During the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals in particular Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss, with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments, including the advantages, drawbacks, and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts, supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 5 includes 24 practices that have a direct impact on SOC sequestration and maintenance in forestry, wetlands, and urban soils.

**Priority-Zone Mapping for Reforestation** Larissa Böhrkircher, Michael Leuchner, Fabio Bayro Kaiser, Christa Reicher, 2023-02-02 Andean dry forest ecosystems are threatened by deforestation and unsustainable land use methods The negative effects for the livelihood of the local population biodiversity and the regional climate could be countered by reforestation measures however dry land forests

have not attracted the same level of interest and investment like other ecosystems This book describes the development of a priority zone map for reforestation measures showing where reforestation might have the greatest social and ecological benefits To achieve this a problem analysis of a case study region is conducted and thematic reforestation benefits are determined Using remote sensing and GIS the areas where benefits can be obtained are mapped in individual layers and compiled into a summarizing priority zone map It is thus possible to identify areas where reforestation would achieve multiple benefits The concept of priority maps could be used to facilitate reforestation strategies by local communities and municipal governments and could thus contribute to initiate an integrated forest and landscape restoration of the Bolivian montane dry forests      **Nuclear Science Abstracts** ,1974      **Registry of Toxic Effects of Chemical Substances**
