Special Senses

The body's sensory receptors must be capable of detecting changing levels within the body and in the external environment. When triggered, these receptors send nerve impulses along afferent pathways to the brain for interpretation, thus allowing the body to assess and adjust to changing conditions so that homeostasis may be maintained.

The sensory receptors of general somatic afferent (GSA) tracts—pain, pressure, temperature changes, and tactile sensations—are widely distributed in the body. These are considered in Chapter 7. In contrast, receptors of the special somatic afferent (SSA) tracts, hearing, equilibrium, smell, and taste, are as yet to be discussed and as such have not yet been completed. The structure and function of the special somatic afferent and the receptors of the special afferent is the chapter.

Journal of the American Medical Association American Medical Association,1910 Development of Sensory Systems C. M. Bate,V. McMillan Carr,P. P. C. Graziadei,H. V. B. Hirsch,A. Hughes,D. Ingle,A. G. Leventhal,G. A. Monti Graziadei,E. W. Rubel,R. Saxod,A. B. Scheibel,M. E. Scheibel,J. Silver,2012-12-06 This preface is addressed to the reader who wishes to inquire into the prevailing concepts hypotheses and theories about development of sensory systems and wants to know how they are exemplified in the following chapters I believe that science is hypothesis and theory and that the growth and evolution of any branch of science can be measured by the degree to which its theories have been reified By that standard one must conclude that developmental neurobiologie is in its infancy The rapid accumulation of observations which has occurred in this branch of science in the past century leads to progress only to the extent that the facts validate or falsify hypotheses The following chapters show that we have a plethora of facts but a dearth of hypotheses Another index of the maturity of any branch of science is its level of historical self awareness Because the history of any branch of science is essentially the history of ideas and of the rise and fall of theories the level of historical awareness is related to the extent to which reification of its hypothetical constructs has advanced It is largely because few theories of development of sensory systems or indeed of developmental neurobiology have progressed far in the process of reification that the history of developmental neurobiology remains unwritten The subject of this volume is hardly mentioned in the many books devoted to the history of related disciplines **Foundations of Reading Instruction** Emmett Albert Betts,1954 **Spinal Cord Medicine, Third Edition** Steven Kirshblum,Vernon W.
