Fatigue Analysis of Asphalt Concrete Under Indirect Tensile Mode of Loading Using Crack Images Manh Tuan Nguyen, Hyun Jong Lee, Jongeun Baek, 2012 In this study various fatigue criteria for indirect tensile IDT fatigue tests were evaluated and a new approach to identify the fatigue failure was proposed based on a crack length criterion The IDT fatigue tests were conducted to characterize the fatigue behavior of various asphalt mixtures such as three warm mix asphalt mixtures and a polymer modified asphalt mixture During the IDT tests digital cameras were mounted to monitor crack growth on the both faces of a specimen Existing three fatigue failure criteria were evaluated regarding to fatigue crack development Then a crack length limit was proposed as a fatigue criterion The IDT strength tests were also conducted to determine fracture energy of the mixtures Based on the new fatigue criterion a fatigue performance model was constituted with dissipated and fracture energy parameters The fatigue model proposed in this study successfully predicted the fatigue

lives of the mixtures with a high level of accuracy The main advantage of this fatigue model is that it does not need a transfer function to convert the fatigue life to crack length or area because fatigue crack length is directly determined from the crack length limit

Mechanisms of Cracking and Debonding in Asphalt and Composite Pavements William G. Buttlar, Armelle Chabot, Eshan V. Dave, Christophe Petit, Gabriele Tebaldi, 2018-05-26 Premature cracking in asphalt pavements and overlays continues to shorten pavement lifecycles and creates significant economic and environmental burden In response RILEM Technical Committee TC 241 MCD on Mechanisms of Cracking and Debonding in Asphalt and Composite Pavements has conducted a State of the Art Review STAR as detailed in this comprehensive book Cutting edge research performed by RILEM members and their international partners is presented along with summaries of open research questions and recommendations for future research This book is organized according to the theme areas of TC 241 MCD i e fracture in the asphalt bulk material interface debonding behaviour and advanced measurement systems This STAR is expected to serve as a long term reference for researchers and practitioners as it contributes to a deeper fundamental understanding of the mechanisms behind cracking and debonding in asphalt concrete and composite pavement systems
