

Staff Report

INTERNET FEASIBILITY STUDY

September 24, 2019

BACKGROUND:

At the August 13, 2019 City Council meeting, the Council directed that City staff place on a future meeting agenda the topic of an internet service feasibility study.

In June, staff provided estimated costs of \$75,000 to \$125,000 to conduct a feasibility study for both retail and wholesale internet service. The Retail Model involves the City designing, constructing, and operating an internet infrastructure network and providing services directly to the end user in competition with the existing private sector providers. In the Wholesale Model, the municipality designs and constructs an internet network, then leases that infrastructure to one or more private providers. In this model, the end users obtain services from the private provider(s), not the City.

CONSULTING MODEL:

As staff previously reported to the City Council, a fiber-to-the-premises provider, MetroNet, has outlined plans to provide internet service to most of the residential properties within the community. MetroNet will join Mediacom, CenturyLink, and ICS as major providers of broadband internet service in the community. However, MetroNet will be the first of these providers to offer fiber-to-the-premises as its only product.

During conversations with internet providers and industry experts earlier this year, City staff heard on several occasions that fiber-to-the-premises services are not economical to provide in areas where there is an existing fiber-to-the-premises provider. Therefore, it is possible that a City fiber-to-the-premises network will not prove feasible if built alongside a competing private fiber-to-the-premises network. However, it is unclear to what extent the City Council's desired improvements (availability, reliability, speed, customer service, cost, and net neutrality) will be achieved by private providers in the Ames community.

Should the City Council decide to pursue a feasibility study, City staff would advise that a different approach be considered rather than focusing a study solely on the feasibility of a municipal internet utility. Under this model, a feasibility study for municipal internet service would be one possible path evaluated to accomplish the Council's six goals related to internet service (availability, reliability, speed, customer service, cost, and net neutrality). However, other paths would also be evaluated to achieve the desired levels of service.
