NASA Technical Memorandum, 1996 **Creating the Cold War University** Rebecca S. Lowen, 1997-07-01 The cold war university is the academic component of the military industrial academic complex and its archetype according to Rebecca Lowen is Stanford University Her book challenges the conventional wisdom that the post World War II multiversity was created by military patrons on the one hand and academic scientists on the other and points instead to the crucial role played by university administrators in making their universities dependent upon military foundation and industrial patronage Contesting the view that the federal grant university originated with the outpouring of federal support for science after the war Lowen shows how the Depression had put financial pressure on universities and pushed administrators to seek new modes of funding She also details the ways that Stanford administrators transformed their institution to attract patronage With the end of the cold war and the tightening of federal budgets universities again face pressures not unlike those of the 1930s Lowen s analysis of how the university became dependent on the State is essential reading for anyone concerned about the future of higher education in the post cold war era

Scientists in the Classroom J. Rudolph, 2002-05-02 During the 1950s leading American scientists embarked on an unprecedented project to remake high school science education Dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication of the Soviet Union led government officials to encourage a handful of elite research scientists fresh from their World War II successes to revitalize the nations science curricula In *Scientists in the Classroom* John L Rudolph argues that the Cold War environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of education and the nature of the curriculum materials that were eventually produced Drawing on a wealth of previously untapped resources from government and university archives Rudolph focuses on the National Science Foundation supported curriculum projects initiated in 1956 What the historical record reveals according to Rudolph is that these materials were designed not just to improve American science education but to advance the professional interest of the American scientific community in the postwar period as well

Something Incredibly Wonderful Happens K.C. Cole, 2024-05-31 How do we reclaim our innate enchantment with the world And how can we turn our natural curiosity into a deep abiding love for knowledge Frank Oppenheimer the younger brother of the physicist J Robert Oppenheimer was captivated by these questions and used his own intellectual inquisitiveness to found the Exploratorium a powerfully influential museum of human awareness in San Francisco that encourages play creativity and discovery all in the name of understanding In this elegant biography K C Cole investigates the man behind the museum with sharp insight and deep sympathy The Oppenheimers were a family with great wealth and education and Frank like his older brother pursued a career in physics But while Robert was unceasingly ambitious and eventually came to be known for his work on the atomic bomb Frank s path as a scientist was much less

conventional His brief fling with the Communist Party cost him his position at the University of Minnesota and he subsequently spent a decade ranching in Colorado before returning to teaching Once back in the lab however Frank found himself moved to create something to make the world meaningful after the bombing of Hiroshima and Nagasaki He was inspired by European science museums and he developed a dream of teaching Americans about science through participatory museums Thus was born the magical world of the Exploratorium forever revolutionizing not only the way we experience museums but also science education for years to come Cole has brought this charismatic and dynamic figure to life with vibrant prose and rich insight into Oppenheimer as both a scientist and an individual

Turbulence—an Odyssey Michael Eckert, 2022-02-01 Turbulence is a research field where high expectations have met with recurrent frustration It is a common perception among physicists mathematicians and engineers that there is a big mystery behind the phenomenon of turbulence Its history has also remained anything but well researched Unlike topics such as quantum theory which began to attract physics historians as long as fifty years ago turbulence has until now received only little professional historical investigation In this book which complements his earlier SpringerBrief *The Turbulence Problem* the author sketches the history of turbulence from the vantage point of its roots Part I the basic concepts Part II and the formation of a scientific community that regarded turbulence as a research field in its own right Part III From this perspective turbulence research appears to undertake an odyssey through uncharted territories The book follows this development up until a conference in Marseille in the year 1961 which marked the

inauguration of turbulence in the words of its organizer as a new science The epilogue contains some observations about turbulence research since 1961 This book provides a rich source of information for all those interested in the history of this major field of basic and applied science How We Teach Science John L. Rudolph, 2019-06-01 Despite an enduring belief that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and determine how science is perceived by the public *Report Number Series Used by the Office of Technical Information in Cataloging Reports* U.S. Atomic Energy Commission, 1960
