Each sample is preceded by identification of the typical location in a specification section where it would appear using the SectionFormat™ of the Construction Specifications Institute; the six digit section number cited is per CSI Masterformat™ 2004 and the five digit section number cited parenthetically is per CSI Masterformat™ 1995.

SECTION 01 81 10 (SECTION 01120) – FACILITY SERVICE LIFE REQUIREMENTS

SPECIFIER NOTE:

Sustainable Federal Facilities: A Guide to Integrating Value Engineering, Life-Cycle Costing, and Sustainable Development, Federal Facilities Council Technical Report No.142; 2001
<http://www.wbdg.org/ccbf/SUSFFC/fedsus.pdf> , states that the total cost of facility ownership, which includes all costs an owner will make over the course of the building's service lifetime, are dominated by operation and maintenance costs. On average, design and construction expenditures, "first costs" of a facility, will account for 5-10 % of the total life-cycle costs. Land acquisition, conceptual planning, renewal or revitalization, and disposal will account for 5-35 % of the total life-cycle costs. However, operation and maintenance will account for 60-85 % of the total life-cycle costs.

Service life planning can improve the economic and environmental impacts of the building. It manages the most costly portion of a building's life cycle costs, the operation and maintenance stage. And, by guiding appropriate and necessary investments over the course of the building's life cycle, increases the residual value of the building. Additionally, service life planning manages environmental impacts. Extending the service life of the building and reducing maintenance and replacements contributes to achieving sustainable development and preservation of scarce resources.

The process of service life planning can be applied to both existing buildings and new constructions. This will help facility managers by indicating anticipated future operations and cyclical maintenance. It may also be extended to provide cost plans for maintenance. However, not all maintenance can be foreseen and planned, and some provision should therefore be made for unforeseen costs.

For existing buildings, many of the choices have been predetermined; and, the building is already some way through its service life. Therefore, planning the service life for existing buildings will focus on assessing the residual service life of building elements and optimizing future operation and maintenance.

For new buildings, a preliminary service life plan should be developed during the design phase and updated during the construction phase to reflect specific building elements incorporated into the building. Buildings with very long design lives may need continual repair and replacement to achieve their design lives. Thus, ease of disassembly and reassembly to retain the existing building fabric may be a design objective, together with the ease of repair without causing damage.
