Beyond Names for Things Michael Tomasello, William E. Merriman, 2014-02-25 Most research on children's lexical development has focused on their acquisition of names for concrete objects. This is the first edited volume to focus specifically on how children acquire their early verbs. Verbs are an especially important part of the early lexicon because of the role they play in children's emerging grammatical competence. The contributors to this book investigate children's earliest words for actions and events and the cognitive structures that might underlie them, the possibility that the basic principles of word learning which apply in the case of nouns might also apply in the case of verbs and the role of linguistic context, especially argument structure in the acquisition of verbs. A central theme in many of the chapters is the comparison of the processes of noun and verb learning. Several contributors make provocative suggestions for constructing theories of lexical development that encompass the full range of lexical items that children learn and use.

Children's Language K. E. Nelson, 2014-03-18 First published in 1983. This series, *Children's Language*, reflects the conviction that extensive work on entirely new fronts along with a great deal of reinterpretation of old front data will be necessary before any persuasive and truly orderly account of language. For all volumes in the series there is a common scheme of operation with two tactics. First to give authors sufficient planning time and freedom to arrive at a chapter-length account of their area of thinking which vividly shows both the progress and the problems in that area with the author of each chapter free to find a workable proportion of new experimental contributions, review and theory. The second tactic concerns the selection of topics for each volume. This is Volume 4. Structures about language and thought and children as employed in certain other fields may well be shaken and stimulated particularly in education, sociology, anthropology, literature and language remediation.

The Spatial Foundations of Cognition and Language Kelly S. Mix, Linda B. Smith, Michael Gasser, 2010. This book presents recent research on the role of space as a mechanism in language use and learning. Experimental psychologists, computer scientists, robotocists, linguists and researchers in child language consider the nature and applications of this research and its implications for understanding the processes involved in language acquisition.

Assessment of Young Developmentally Disabled Children Theodore D. Wachs, Robert Sheehan, 2013-06-29. Our knowledge of the cognitive and social/emotional functioning of developmentally disabled infants and preschoolers derives in large part from our assessment of such children. This book has been developed to familiarize readers with the characteristics of developmentally disabled children and to introduce to readers aspects of measurement that are of relevance to the assessment of atypical infants and preschoolers. The book has been developed with clinicians and

prospective clinicians in mind These are individuals who are committed to the care and education of developmentally disabled infants and preschoolers and the families of those children The book has thus been written to provide support for the use of assessment data in planning early intervention programs Of special note in the development of this edited book is that it is divided into four major parts with interrelated chapters in each part The authors of chapters in Parts II and III had access to the chapters in Part I before writing their chapters The summary chapters found in Part IV were similarly written by authors having access to all chapters in Parts I-III This approach to the development of an edited book was chosen as a way of ensuring an integration of major concepts throughout the book This process is also a reflection of our belief that assessment is an interdisciplinary process involving the synthesis of a number of diverse interests
