# The Internal Combustion Engine

A report by Jonathan Smith

## Overview

The **internal combustion engine** is an engine in which the combustion of a fuel (not a fossil fuel) occurs with an oxidizer (usually air) in a combustion chamber. In an internal combustion engine the expansion of the high-temperature and -pressure gases produced by combustion applies direct force to some component of the engine, such as pistons, turbine blades, or a nozzle. This force moves the component over a distance, generating useful mechanical energy.
