3.4. Strength of materials under the action of force

At all times:

- Materials must resist forces
- Structures are reinforced by cross-bracing
- Metal beams have different cross-sectional shapes to lower the amount and cost of the material used.

Forces that usually act on materials are tension, compression, torsion, and bending.

Consider the impact that these forces have on a beam:

Suitability of construction materials

- Materials must fit their purpose; therefore they are long-lasting and resist forces.
- The suitability of materials depends on:
 1. Properties of materials i.e., toughness, brittleness, stability, fatigue.
 2. Safety of materials e.g. reinforced glass, hardened steel, etc. This also includes the safety of the workers: protective masks for toxins or debris, earplugs, safety glasses, gloves, and hard hats.
 3. Cost-effectiveness of materials
 - Locally available materials, durability, and upkeep required.
 - Transport costs of obtaining materials.
