Based on a large scale international study of teachers in Los Angeles Chicago Ontario and New York this book illustrates the ways increased use of high stakes standardized testing is fundamentally changing education in the US and Canada with a negative overall impact on the way teachers teach and students learn Standardized testing makes understanding students strengths and weaknesses more difficult and class time spent on testing consumes scarce time and attention needed to support the success of all students further disadvantaging ELLs students with exceptionalities low income and racially minoritized students

Catherine Besteman, Hugh Gusterson, 2019-05-23 Essays on the downsides dysfunctions and dangers of automated decision making An excellent survey of the algorithmically managed life Choice The phone systems that businesses use to screen calls The link between student standardized test scores and public schools access to resources The algorithms that regulate patient diagnoses and reimbursements to doctors The impenetrable corporate bureaucracy that can drive customers in need of help up the wall or drive them to suicide The storage sorting and analysis of massive amounts of information have enabled the automation of decision making at an unprecedented level Meanwhile computers have offered a model of cognition that increasingly shapes our approach to the world The proliferation of roboprocesses is the result as editors Catherine Besteman and Hugh Gusterson observe in this rich and wide ranging volume which features contributions from a distinguished cast of scholars in anthropology communications international studies and political science Though automatic processes are designed to be engines of rational systems the stories in Life by Algorithms reveal how they can in fact produce absurd inflexible or even dangerous outcomes Joining the call for algorithmic transparency the contributors bring exceptional sensitivity to everyday sociality into their critique to better understand how the perils of modern technology affect finance medicine education housing the workplace food production public space and emotions not as separate problems but as linked manifestations of a deeper defect in the fundamental ordering of our society The Machine Stops E M Forster s 1909 science fiction story tells the tale of a human society collapsing when the technology upon which it has become dependent fails Think of this volume as The Machine Starts a collection of unsettling ethnographic accounts of the rise of algorithmic governance A necessary and sobering call to arms Stefan Helmreich Massachusetts Institute of Technology Contributors include Catherine Besteman Alex Blanchette Robert W Gehl Hugh Gusterson Catherine Lutz Ann Lutz Fernandez Joseph Masco Sally Engle Merry Keesha M Middlemass Noelle Stout Susan J Terrio **Not Paved for Us** Camika Royal, 2022-07-19 Winner of the 2024 AERA Outstanding Book Award Not Paved for Us chronicles a fifty year period in Philadelphia education and offers a critical look at how school reform efforts do and do not transform outcomes for Black students and educators This illuminating book offers an extensive expert analysis of a school system that bears the legacy hallmarks and consequences that lie at the intersection of race and education Urban education scholar Camika Royal deftly analyzes decades of efforts aimed at improving school performance within the School District of Philadelphia SDP in a brisk survey spanning every SDP superintendency from the 1960s through 2017 Royal interrogates the history of education and educational reforms recounting city state and federal interventions She covers SDP s connections with the Common School Movement and the advent of the Philadelphia Freedom Schools and she addresses federal policy shifts from school desegregation to the No Child Left Behind and Every Student Succeeds Acts Her survey provides sociopolitical context and rich groundwork for a

nuanced examination of why many large urban districts struggle to implement reforms with fidelity and in ways that advance Black students academically and holistically In a bracing critique Royal bears witness to the ways in which positive public school reform has been obstructed through racism and racial capitalism but also via liberal ideals neoliberal practices and austerity tactics Royal shows how despite the well intended actions of larger entities the weight of school reform here as in other large urban districts has been borne by educators striving to meet the extensive needs of their students families and communities with only the slightest material financial and human resources She draws on the experiences of Black educators and community members and documents their contributions Not Paved for Us highlights the experiences of Black educators as they navigate the racial and cultural politics of urban school reform Ultimately Royal names dissects and challenges the presence of racism in school reform policies and practices while calling for an antiracist future

The Importance of Being Little Erika Christakis, 2017-02-07 Christakis expertly weaves academic research personal experience and anecdotal evidence into her book a bracing and convincing case that early education has reached a point of crisis her book is a rare thing a serious work of research that also happens to be well written and personal engaging and important Washington Post What kids need from grown ups but aren't getting an impassioned plea for educators and parents to put down the worksheets and flash cards ditch the tired craft projects yes you Thanksgiving Handprint Turkey and exotic vocabulary lessons and double down on one simple word play NPR The New York Times bestseller that provides a bold challenge to the conventional wisdom about early childhood with a pragmatic program to encourage parents and teachers to rethink how and where young children learn best by taking the child's eye view of the learning environment To a four year old watching bulldozers at a construction site or chasing butterflies in flight the world is awash with promise Little children come into the world hardwired to learn in virtually any setting and about any matter Yet in today's preschool and kindergarten classrooms learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child's intelligence while overtaxing the child's growing brain These mismatched expectations wreak havoc on the family parents fear that if they choose the wrong program their child won't get into the right college But Yale early childhood expert Erika Christakis says our fears are wildly misplaced Our anxiety about preparing and safeguarding our children's future seems to have reached a fever pitch at a time when ironically science gives us more certainty than ever before that young children are exceptionally strong thinkers In her pathbreaking book Christakis explains what it's like to be a young child in America today in a world designed by and for adults where we have confused schooling with learning She offers real life solutions to real life issues with nuance and direction that takes us far beyond the usual prescriptions for fewer tests more play She looks at children's use of language their artistic expressions the way their imaginations grow and how they build deep emotional bonds to stretch the boundaries of their small worlds Rather than clutter their worlds with more and more stuff sometimes the wisest course for us is to learn how to get out of their way Christakis's message is energizing and reassuring young children are

inherently powerful and they and their parents will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood revealing a place that s rich with possibility *Critical Conversations* Tom Gilson,2016-02-27 Christian parents need to be prepared to answer the myriad challenges teens might hear in today s increasingly pro homosexual culture Why shouldn t gays get married Who says gay sex is wrong Does the Bible actually say there s anything wrong with homosexuality Don t you care that kids are being bullied just for being themselves To start the discussion Gilson provides a brief history of the issues beginning with the sexual revolution of the 1960s He explains how and why cultural attitudes have reversed on this subject in such a short timespan leaving Christians scrambling for answers This is perhaps the most complicated and contentious issue Christians face in today s culture Most churches are poorly equipped to handle it parents are even less prepared The good news is that parents need not have pat answers ready before they dive into conversations with their teens and preteens on this difficult topic Learning together parents struggling through these issues alongside their kids and leading them to biblical answers has relational benefits Answers are important though so manageable nontechnical answers to common questions surrounding this issue are provided as well as a guide to further resources *Bounded Rationality in Decision Making Under Uncertainty: Towards Optimal Granularity* Joe Lorkowski,Vladik Kreinovich,2017-07-01 This book addresses an intriguing question are our decisions rational It explains seemingly irrational human decision making behavior by taking into account our limited ability to process information It also shows with several examples that optimization under granularity restriction leads to observed human decision making Drawing on the Nobel prize winning studies by Kahneman and Tversky researchers have found many examples of seemingly irrational decisions e g we overestimate the probability of rare events Our explanation is that since human abilities to process information are limited we operate not with the exact values of relevant quantities but with granules that contain these values We show that optimization under such granularity indeed leads to observed human behavior In particular for the first time we explain the mysterious empirical dependence of betting odds on actual probabilities This book can be recommended to all students interested in human decision making to researchers whose work involves human decisions and to practitioners who design and employ systems involving human decision making so that they can better utilize our ability to make decisions under uncertainty
