If the dismantling work is being carried out as a precursor to crankcase separation, the gearbox sprocket should be removed at this juncture. With the engine in position in the frame, it is easiest to release the sprocket retaining nut with the chain in place and the rear brake applied, as described in Section 3.8 of the Handbook.

With the engine on the workbench, the sprocket can be prevented from rotating by locking the crankshaft with a bar passed through the connecting rod eye, and selecting top gear. Alternatively, loop the drive chain around the sprocket and clamp the ends with a self-locking wrench. Knock back the locking tab, and slacken and remove the securing nut, washer and spacer.
