ACSM Bulletin ,2007 Current Programs ,1977 **Cumulated Index Medicus** ,1989 *Journal of the Institution of Electrical Engineers* ,1948 *Plasticity of GABAergic Synapses* Andrea Barberis,Alberto Bacci,2016-01-22 Learning and memory are believed to depend on plastic changes of neuronal circuits due to activity dependent potentiation or depression of specific synapses During the last two decades plasticity of brain circuits was hypothesized to mainly rely on the flexibility of glutamatergic excitatory synapses whereas inhibitory synapses were assumed relatively invariant to ensure stable and reliable control of the neuronal network As a consequence while considerable efforts were made to clarify the main mechanisms underlying plasticity at excitatory synapses the study of the cellular molecular mechanisms of inhibitory plasticity has received much less attention Nevertheless an increasing body of evidence has revealed that inhibitory synapses undergo several types of plasticity at both pre and postsynaptic levels Given the crucial role of inhibitory interneurons in shaping network activities such as generation of oscillations selection of cell assemblies and signal integration modifications of the inhibitory synaptic strength represents an extraordinary source of versatility for the fine control of brain states This versatility also results from the rich diversity of GABAergic neurons in several brain areas the specific role played by each inhibitory neuron subtype within a given circuit and the heterogeneity of the properties and modulation of GABAergic synapses formed by specific interneuron classes The molecular mechanisms underlying the potentiation or depression of inhibitory synapses are now beginning to be unraveled At the presynaptic level retrograde synaptic signaling was demonstrated to modulate GABA release whereas postsynaptic forms of plasticity involve changes in the number gating properties of GABAA receptors and or shifts of chloride gradients In addition recent research indicates that GABAergic tonic inhibition can also be plastic adding a further level of complexity to the control of the excitatory inhibitory balance in the brain The present Topic will focus on plasticity of GABAergic synapses with special emphasis on the molecular mechanisms of plasticity induction and or expression **Nuclear Science Abstracts** ,1974 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976 pre dating the prestigious INIS database which began in 1970 NSA existed as a printed product Volumes 1 33 initially created by DOE s predecessor the U S Atomic Energy Commission AEC NSA includes citations to scientific and technical reports from the AEC the U S Energy Research and Development Administration and its contractors plus other agencies and international organizations universities and industrial and research organizations References to books conference proceedings papers patents dissertations engineering drawings and journal articles from worldwide sources are also included Abstracts and full text are provided if available **Journal** ,1948 Includes annual report of its council 1941 48 in pt 1 **Public Affairs Information Service Bulletin** ,1972 *Bulletin of the Public Affairs Information Service* Public Affairs Information Service,1961 **Index Medicus** ,2002-12 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
