Interaction between the Gut Flora and Immunity in Intestinal Diseases Yating Li, Silvia Turroni, Lan Gong, Ding Shi, 2024-08-20 The composition of gut microbiota plays a critical role in maintaining the host's health particularly in regulating immune homeostasis and the intestinal immune response A massive effort has pointed to the importance of these interactions in various intestinal diseases like colorectal cancer CRC irritable bowel syndrome IBS and inflammatory bowel disease IBD Microbiome influences the formation of key components of both the innate and adaptive immune systems while the immune system is responsible for regulating and maintaining the symbiotic relationship between the host and microbes Currently the crosstalk between gut flora and host immunity is not fully revealed in both homeostasis maintenance

and disease development Hence detailed mechanistic studies are needed to further explore the microbial manipulation on host immunity as well as the immune response to microbiome dysbiosis in intestinal diseases Current evidence indicates a strong bidirectional interaction between microbiome perturbation and immune dysregulation The aim of this Research Topic is to create a platform for the advancement of research on the causal relationship between the microbiome and immunity Besides we would like to define the core microbiota responsible for the initiation and progression of intestinal diseases the molecular mechanisms of host immune microbiome interactions and novel gut targeted pharmacological interventions to achieve a positive impact on intestinal disease

Immunoregulatory Mechanisms of Interferon Jorg Hermann Fritz, Claudia U. Duerr, 2020-03-11 Interferons IFN belong to the family of cytokines and have been described first in the late 1950s as an inhibitory factor of viral replication Since then the impact of interferon has been greatly expanded and its function comprises

a role not only in different types of infection cancer and autoimmunity but importantly also in immunehomeostasis IFN have important anti viral effects but it is becoming more and more evident that they are true immunomodulators and have an important impact on the development and maintenance of innate and adaptive immunity
