

SeisWorks® Horizon Input

SeisWorks® Horizon Input imports interpreted horizon files directly from the SeisWorks® horizons stored in the legacy OpenWorks® (version 2003.12.X) database and saves them as ProMAX® horizon tables.

Note: To read and write R5000 version SeisWorks® horizons, use the SeisSpace® R5000 tools.

In order to use **SeisWorks® Horizon Input**, you must have a valid OpenWorks® license.

Theory

SeisWorks® horizons are read directly from the legacy OpenWorks® (version 2003.12.X) interpretation database and saved as ProMAX® horizon tables within the Area and Line in which the **SeisWorks® Horizon Input** process is executed.

To ensure that a pick is available for every trace within the SeisWorks® database, it is usually desirable to perform a global snap of all horizons within the SeisWorks® software prior to importing them. In the case of large datasets, such as those in excess of 10,000 lines, it may be necessary to import the SeisWorks® horizon file from sub-sets of lines within the SeisWorks® project. You are therefore presented the option of selecting the lines from which interpretations should be imported.

In addition, you are permitted to decimate the incoming table when using **SeisWorks® Horizon Input**. Once in the ProMAX® system, picks can always be snapped in order to get picks output for every trace. This is usually desirable when using such processes as **Sequence Attribute Analysis (SAA)**.

Note: Decimating the horizon table has virtually no effect on **Sequence Attribute Analysis** run times, and is therefore not recommended. The most effective way to reduce **SAA** run times is to decimate the number of traces being imported via **SeisWorks® Seismic Input**.

Landmark Seisworks Manual:

Color Atlas of Skeletal Landmark Definitions E-Book Serge van Sint Jan, 2007-04-18 This book covers most skeletal landmarks that are palpable through manual palpation and virtual palpation i.e. using 3D models generated from medical imaging. Each chapter focuses on a particular bone or segment and includes a general anatomical presentation of the bone. SL using images showing real specimens and 3D bone models very detailed descriptions of skeletal landmarks using manual palpation and virtual palpation. These definitions have been written in order to be reproducible. Each section includes detailed descriptions of all palpable skeletal landmarks for the current bone. Each landmark is described on one page. Also each landmark page is labelled by a unique acronym. The latter should be used for further data exchange and programming in order to guarantee that no redundant label exists. Full colour over 500 full colour images. Each bone is described in a separate section making referencing easy. Multidisciplinary approach.

Augmented Reality, Virtual Reality, and Computer Graphics Lucio Tommaso De Paolis, Antonio Mongelli, 2016-06-10 The 2 volume set LNCS 9768 and 9769 constitutes the refereed proceedings of the Third International Conference on Augmented Reality Virtual Reality and Computer Graphics AVR 2016 held in Lecce Italy in June 2016. The 40 full papers and 29 short papers presented were carefully reviewed and selected from 131 submissions. The SALENTO AVR 2016 conference intended to bring together researchers, scientists and practitioners to discuss key issues, approaches, ideas, open problems, innovative applications and trends on virtual and augmented reality, 3D visualization and computer graphics in the areas of medicine, cultural heritage, arts, education, entertainment, industrial and military sectors.

Seismic Inversion Methods: A Practical Approach S. P. Maurya, N. P. Singh, K. H. Singh, 2020-05-28 This book introduces readers to seismic inversion methods and their application to both synthetic and real seismic data sets. Seismic inversion methods are routinely used to estimate attributes like P impedance, S impedance, density, the ratio of P wave and S wave velocities and elastic impedances from seismic and well log data. These attributes help to understand lithology and fluid contents in the subsurface. There are several seismic inversion methods available but their application and results differ considerably which can lead to confusion. This book explains all popular inversion methods, discusses their mathematical backgrounds and demonstrates their capacity to extract information from seismic reflection data. The types covered include model based inversion, colored inversion, sparse spike inversion, band limited inversion, simultaneous inversion, elastic impedance inversion and geostatistical inversion which includes single attribute analysis, multi attribute analysis, probabilistic neural networks and multi layer feed forward neural networks. In addition, the book describes local and global optimization methods and their application to seismic reflection data. Given its multidisciplinary, integrated and practical approach, the book offers a valuable tool for students and young professionals, especially those affiliated with oil companies.

Landmarks in Earth Reinforcement H. Ochiai, K. Omine, J. Otani, N. Yasufuku, 2001-01-01 Earth reinforcing techniques are increasingly becoming a useful, powerful and economical solution to

various problems encountered in geotechnical engineering practice Expansion of the experiences and knowledge in this area has succeeded in developing new techniques and their applications to geotechnical engineering problems In order to discuss the latest experiences and knowledge and with the purpose of spreading them all over the world for further development the IS Kyushi conference series on the subject of earth reinforcement have been held in Fukuoka Japan every four years since 1988 This fourth symposium entitled Landmarks in Earth Reinforcement is a continuation of the series IS Kyushu conferences and also aims at being one of the landmarks in the progress of modern earth reinforcement practice The first volume contains 137 papers selected for the symposium covering almost every aspect of earth reinforcement The second volume contains texts of the special and keynote lectures
