Landscape Indicators Assessing And Monitoring Landscape Quality:

Landscape Indicators Claudia Cassatella, Attilia Peano, 2011-01-28 In recent years EU policy towards the landscape has become better defined whereas at the same time the notion of landscape itself remains elusive The need for indicators to evaluate and monitor the effects of landscape policies and plans is urgent What is more landscape is one of the components considered in environmental reporting but unlike air soil or water it is difficult to measure using quantitative methods With studies on landscape indicators being as rare as they are this volume is an attempt to fill the gap dealing as it does with the definition and use of specific indicators for landscape assessment and monitoring To tackle the diverse dimensions of the landscape whose complexity is well known the subject is approached by a multidisciplinary team of experts in landscape ecology landscape history landscape perception regional planning strategic environmental assessment and environmental impact assessment procedures and multi criteria assessment methods Individual chapters include comparative assessments of studies conducted thus far in the EU as well as detailed analyses of ecological historical perceptive land use and economic ways of looking at landscape As well as providing a rich source of references for researchers studying the landscape from a variety of perspectives the book will be required reading for European officials involved at any level in planning or assessing the landscape or environment

Measuring Landscapes Andre Botequilha Leita, Joseph Miller, Jack Ahern, Kevin McGarigal, 2012-09-26 This practical handbook bridges the gap between those scientists who study landscapes and the planners and conservationists who must then decide how best to preserve and build environmentally sound habitats Until now only a small portion of the relevant science has influenced the decision making arenas where the future of our landscapes is debated and decided The authors explain specific tools and concepts to measure a landscape s structure form and change over time Metrics studied include patch richness class area proportion patch number and density mean patch size shape radius of gyration contagion edge contrast nearest neighbor distance and proximity These measures will help planners and conservationists make better land use decisions for the future

Landscape Planning and Rural Development Carlo Rega, 2014-05-20 This book aims to contribute to the current debate on how to integrate rural development policies and landscape planning in rural areas It highlights the key issues at stake and the possibilities for synergies between landscape planning and policies in light of European development policies particularly the EU s Rural Development Policy and the Common Agricultural Policy CAP Case studies from different rural contexts and landscapes are provided illustrating tools and options to make the advocated integration operational Recommendations and guidance to policy making are proposed The case studies presented cover 1 the use of visual assessment techniques to support landscape planning in rural areas 2 participative applications of landscape assessment techniques in peri urban areas 3 multi scale approaches to landscape management in Alpine areas and 4 the application of landscape economic evaluation to foster rural development strategies

Landscape Planning with Ecosystem Services Christina von Haaren, Andrew A. Lovett, Christian Albert, 2019-06-25

Human well being depends in many ways on maintaining the stock of natural resources which deliver the services from which human s benefit However these resources and flows of services are increasingly threatened by unsustainable and competing land uses Particular threats exist to those public goods whose values are not well represented in markets or whose deterioration will only affect future generations As market forces alone are not sufficient effective means for local and regional planning are needed in order to safeguard scarce natural resources coordinate land uses and create sustainable landscape structures This book argues that a solution to such challenges in Europe can be found by merging the landscape planning tradition with ecosystem services concepts Landscape planning has strengths in recognition of public benefits and implementation mechanisms while the ecosystem services approach makes the connection between the status of naturalassets and human well being more explicit It can also provide an economic perspective focused on individual preferences and benefits which helps validate the acceptability of environmental planning goals Thus linking landscape planning and ecosystem services provides a two way benefit creating a usable science to meet the needs of local and regional decision making The book is structured around the Driving forces Pressures States Impacts Responses framework providing an introduction to relevant concepts methodologies and techniques It presents a new ecosystem services informed approach to landscape planning that constitutes both a framework and toolbox for students and practitioners to address the environmental and landscape challenges of 21st century Europe

Landscape assessment on global monitoring of diet quality, 2020-02-05 **Bridging the Gap** Grazia Brunetta,Alessandra Faggian,Ombretta Caldarice,2021-06-10 The concept of resilience has arisen as a new way of thinking becoming a response to both the causes and effects of ongoing global challenges As it strongly stresses cities transformative potential resilience s final purpose is to prevent and manage unforeseen events and improve communities environmental and social quality Although the resilience theory has been investigated in depth several methodological challenges remain mainly related to the concept s practical sphere As a matter of fact resilience is commonly criticised for being too ambiguous and empty of meaning At the same time turning resilience into practice is not easy to do This will arguably be one of the most impactful global issues for future research on resilience The Special Issue Bridging the Gap The Measure of Urban Resilience falls under this heading and it seeks to synthesise state of the art knowledge of theories and practices on measuring resilience The Special Issue collected 11 papers that address the following questions What are the theoretical perspectives of measuring urban resilience What are the existing methods for measuring urban resilience What are the main features that a technique for measuring urban resilience needs to have What is the role of measuring urban resilience in operationalising cities ability to adapt recover and benefit from shocks

Cultural Territorial Systems Francesco Rotondo,Francesco Selicato,Vera Marin,Josefina Lopez Galdeano,2016-04-19 This book seeks to enhance the cultural dimension of sustainable development and particularly focuses on minor historic centers and their natural and rural landscapes In a society becoming ever more globalized without territorial restrictions in the

production of goods and able to reproduce in China the goods and product characteristic of South American crafts to mention just two extremes the only element that can still be contextualized is heritage identity the result of close integration between cultural assets intangible assets and settled communities Thus heritage identity is one of the few elements together with natural resources which has the potential for economic development that is still firmly rooted in places and local populations These towns are often the centerpiece of urban landscapes and geographical areas with original features not always but often as individual places within networks of minor historical centers linked by shared history traditions and or natural elements rivers forests river systems or other natural elements They are outside the major tourist networks even if now there is a budding interest in the touristic exploitation of these environments So they are the right places to pursue a sustainable and local development with a cultural perspective This book is a product of the VIVA_EASTPART project Valorisation and Improving of management of Small Historic Centres in the eastern PARTnership region under the EU funded ENPI Eastern Partnership program It complements the more practically focused work that is in production from this group more focused on empirical approaches to the development of minor historic centers of the nations involved Though the book has been influenced by this research and working experience the authors are solely responsible for the content and opinions presented

Strategic Environmental Assessment: Integrating Landscape and Urban Planning Fabio Cutaia, 2016-07-20 This book explores the opportunities offered by Strategic Environmental Assessment in the context of guaranteeing the synchronized integration of landscape in all its aspects within urban plans thereby helping to overcome the constraints of rigidly framed sector focused laws and a purely aesthetic concept of landscape In pursuit of this goal various scholars have previously attempted to construct arrays of indicators relating to the different conceptions of landscape This book critically examines the most complete proposals of this nature systematizing and comparing them and finally offering some guidelines with respect to their codification within specific application protocols After opening chapters exploring the origins of the problem and analysing the European normative frame for Strategic Environmental Assessment two case studies are described and discussed A model is then presented for the evaluation of the effects of urban plans on landscape including in cultural and perceptual terms The author demonstrates that when suitably employed Strategic Environmental Assessment can indeed facilitate the integration of environmental economic and social sustainability into urban planning

Urban Resilience for Risk and Adaptation Governance Grazia Brunetta, Ombretta Caldarice, Nicola Tollin, Marti Rosas-Casals, Jordi Morató, 2018-08-02 This book brings together a series of theory and practice essays on risk management and adaptation in urban contexts within a resilient and multidimensional perspective The book proposes a transversal approach with regard to the role of spatial planning in promoting and fostering risk management as well as institutions challenges for governing risk particularly in relation to new forms of multi level governance that may include stakeholders and citizen engagement The different contributions focus on approaches policies and practices able to contrast risks in urban systems generating social

inclusion equity and participation through bottom up governance forms and co evolution principles Case studies focus on lessons learned as well as the potential and means for their replication and upscaling also through capacity building and knowledge transfer Among many other topics the book explores difficulties encountered in and creative solutions found community and local experiences and capacities organizational processes and integrative institutional technical approaches to risk issue in cities

Science of Valuations Salvatore Giuffrida, Maria Rosa Trovato, Paolo Rosato, Enrico Fattinnanzi, Alessandra Oppio, Simona Chiodo, 2024-04-16 This volume collects the best papers presented at the 2019 Conference SIEV Italian Society of Appraisal and Valuation on the Science of Evaluation foundations actuality and prospects The book consists of twenty six papers and is organized into four parts the first one collects reflections on the nature of the value judgement on the truth of the evaluative statement and on the authenticity its contents the values the next three present operational experiences in the three fields of natural urban and cultural heritage where the knowledge of the value of the human space supports decisions and policies highlighting feature concerning value and valuations in the dialectic between earth and the city the value bearers between heuristic and normatively the role of valuation for the complementarity of rules and creativity The book is being published in the midst of the new radical transformations of the equilibrium between social system and environment generated by the serious and unexpected crises of the third decade of this century Reflections on the reality that fills evaluative statement with truth the reality of values is more topical than ever in a historic phase in which the role of democracies and the destiny of civil coexistence is called into question claiming the order of unamendable values like truth justice and beauty The book brings together experiences that focus on the intentional evaluative consciousness as a condition for the responsibility of the subject individual and collective concerning the saliences and urgencies most significantly contributing to the formation of orderly communities
