Problem Solving Workshop: **Mixed Problem Solving**

For use with pages 220–255

- Multi-Step Problem** A stunt man working on a movie set falls from a window that is 70 feet above an air cushion positioned on the ground.
 - Write a function that models the height of the stunt man as he falls.
 - Graph the function.
 - After how many seconds does the stunt man hit the air cushion?
 - What are the domain and range of the function?
- Multi-Step Problem** A science center has a rectangular parking lot. The science center wants to add 18,400 square feet to the area of the parking lot by expanding the existing parking lot as shown.

- Find the area of the existing parking lot.
 - Write a verbal model and an equation that you can use to find the value of x .
 - Solve your equation from part (b). By what distance x should the length and width of the parking lot be expanded?
- Open-Ended** Write three different quadratic functions whose graphs have the line $x = -2$ as an axis of symmetry but have different y -intercepts.
 - Gridded Response** A cable is suspended between the tops of two poles that are both 12 feet tall. The cable forms a parabola modeled by the equation $y = \frac{4}{289}(x - 17)^2 + 10$ where x and y are measured in feet. What is the distance between the two poles, in feet?

- Extended Response** The diagonal of the screen on a widescreen television measures 30 inches. The ratio of the screen's width w to its height h is 16:9.
 - Write an expression for w in terms of h .
 - Use the Pythagorean theorem and the result from part (a) to write an equation that you can use to find h .
 - Solve the equation from part (b). *Explain* why you must reject one of the solutions.
 - What are the height, width, and area of the television screen?
- Short Response** You are creating a wood frame of uniform width for a picture that is 5 inches by 7 inches. You have 63 square inches of wood for the frame. Write and solve an equation to find the width x . Does doubling the width require exactly twice as much wood? *Explain*.

- Extended Response** A sporting goods store sells about 200 pairs of running shoes each month when it charges \$60 per pair. For each \$1 increase in price, 2 fewer pairs are sold each month.
 - Write a function that gives the sporting goods store's revenue R if there are x dollar price increases.
 - What value of x maximizes R ? *Explain* the meaning of your answer in this situation.
 - Repeat parts (a) and (b) assuming each \$1 decrease in price results in 2 more pairs of running shoes being sold. Why do you obtain a negative x -value in part (b)?

Teaching Multi-step Problem Solving in Mathematics Using the Flick-it Approach Tiffany dos Santos, 2014 The purpose of this project was to increase students effectiveness in multi step problem solving in mathematics through breaking a multi step word problem into smaller pieces that could then be taken one step at a time using an explicit approach called the FLICK it Approach Through using this strategy students understanding of the problem and their confidence in solving would increase when facing multi step word problems allowing for the development of more effective problem solving skills The researcher based this project on research supported principles of explicit instruction used as a tool to assist students in solving multi step word problems and on the evidence that confidence in math is a major indicator in success in mathematical problem solving Time was set aside for solving problems using this explicit approach four days a week including time to create resource pages that would be used within the context of the FLICK it Approach
