This is the first textbook based around the curriculum for prospective and practising primary and secondary teachers and other outdoor educators. The principles and examples presented are intended to be adapted by teachers to suit the needs of their students in ways that draw upon content offered by the local landscape and its natural and built heritage. Although the focus of this book is the real world beyond the classroom, it is also about good teaching wherever it takes place. While there are chapters on practical issues such as risk management and supervising groups outdoors, the chapters on curriculum, sustainability, curiosity, responsibility and educational communities will serve as a valuable guide for anyone interested in applying educational theory to practice. *Visible Learning for Mathematics, Grades K-12* John Hattie, Douglas Fisher, Nancy Frey, Linda M. Gojak, Sara Delano Moore, William Mellman, 2016-09-15. Rich tasks, collaborative work, number talks, problem-based learning, direct instruction with so many possible approaches: how do we know which ones work the best? In *Visible Learning for Mathematics*, six acclaimed educators assert it's not about which one; it's about when and show you how to design high-impact instruction so all students demonstrate more than a year's worth of mathematics learning for a year spent in school. That's a high bar, but with the amazing K-12 framework here, you choose the right approach at the right time, depending upon where learners are. Within three phases of learning—surface, deep, and transfer—this results in visible learning because the effect is tangible. The framework is forged out of current research in mathematics combined with John Hattie's synthesis of more than 15 years of education research involving 300 million students. Chapter by chapter and equipped with video clips, planning tools, rubrics, and templates, you get the inside track on which instructional strategies to use at each phase of the learning cycle. **Surface learning phase** When, through carefully constructed experiences, students explore new concepts and make connections to procedural skills and vocabulary that give shape to developing conceptual understandings. **Deep learning phase** When, through the solving of rich, high-cognitive tasks and rigorous discussion, students make connections among conceptual ideas, form mathematical generalizations, and apply and practice procedural skills with fluency. **Transfer phase** When students can independently think through more complex mathematics and can plan, investigate, and elaborate as they apply what they know to new mathematical situations. To equip students for higher-level mathematics learning, we have to be clear about where students are, where they need to go, and what it looks like when they get there. *Visible Learning for Math* brings about powerful, precision teaching for K-12 through intentionally

designed guided collaborative and independent learning
