Parallel Problem Solving from Nature - PPSN VII Juan J. Merelo, Panagiotis Adamidis, Hans-Georg Beyer, 2003-06-30 We are proud to introduce the proceedings of the Seventh International Conference on Parallel Problem Solving from Nature PPSN VII held in Granada, Spain on 7-11 September 2002. PPSN VII was organized back-to-back with the Foundations of Genetic Algorithms (FOGA) conference which took place in Torremolinos, Malaga, Spain in the preceding week. The PPSN series of conferences started in Dortmund, Germany in 1991. From that pioneering meeting, the event has been held biennially in Brussels, Belgium; 2 Jerusalem, Israel; 3 Berlin, Germany; 4 Amsterdam, The Netherlands; 5 and Paris, France; 6. During the Paris conference, several bids to host PPSN 2002 were put forward. It was decided that the conference would be held in Granada with Juan J. Merelo Guervos as General Chairman. The scientific content of the PPSN conference focuses on problem solving paradigms gleaned from natural models with an obvious emphasis on those that display an innate parallelism such as evolutionary algorithms and ant colony optimization algorithms. The majority of the papers, however, concentrate on evolutionary and hybrid algorithms as is shown in the contents of this book and its predecessors. This edition of the conference proceedings has a large section on applications that they to classical problems or to real world engineering problems which shows how bio-inspired algorithms are extending their

Chawdhry, Rajkumar Roy, Raj K. Pant, 2012-12-06 Soft Computing has emerged as an important approach towards achieving intelligent computational paradigms where key elements are learning from experience in the presence of uncertainties fuzzy belief functions and evolution of the computing strategies of the learning agent itself Fuzzy neural and evolutionary computing are the three major themes of soft computing The book presents original research papers dealing with the theory of soft computing and its applications in engineering design and manufacturing The methodologies have been applied to a large variety of real life problems Application of soft computing has provided the opportunity to integrate human like vagueness and real life uncertainty to an otherwise hard computer programme Now a computer programme can learn adapt and evolve using soft computing The book identifies the strengths and limitations of soft computing techniques particularly with reference to their engineering applications The applications range from design optimisation to scheduling and image analysis Goal optimisation with incomplete information and under uncertainty is the key to solving real life problems in design and manufacturing Soft computing techniques presented in this book address these issues Computational complexity and efficient implementation of these techniques are also major concerns for realising useful industrial applications of soft computing The different parts in the book also address these issues The book contains 9 parts 8 of which are based on papers from the 2nd On line World Conference on Soft Computing in Engineering Design and Manufacture WSC2 *Parallel Problem Solving from Nature -- PPSN XIII* Thomas Bartz-Beielstein, Juergen Branke, Bogdan
