Planck Brandon R. Brown, 2015-05-01 Max Planck is credited with being the father of quantum theory and his work was described by his close friend Albert Einstein as the basis of all twentieth century physics But Planck's story is not well known especially in the United States A German physicist working during the first half of the twentieth century his library personal journals notebooks and letters were all destroyed with his home in World War II What remains other than his contributions to science are handwritten letters in German shorthand and tributes from other scientists of the time In Planck Driven by Vision Broken by War Brandon R Brown interweaves the voices and writings of Planck his family and his contemporaries with many passages appearing in English for the first time to create a portrait of a groundbreaking physicist working in the midst of war Planck spent much of his adult life grappling with the identity crisis of being an influential German with ideas that ran counter to his government During the later part of his life he survived bombings and battlefields surgeries and blood transfusions all the while performing his influential work amidst a violent and crumbling Nazi bureaucracy When his son was accused of treason Planck tried to use his standing as a German national treasure and wrote directly to Hitler to spare his son's life Brown tells the story of Planck's friendship with the far more outspoken Albert Einstein and shows how his work fits within the explosion of technology and science that occurred during his life This story of a brilliant man living in a dangerous time gives Max Planck his rightful place in the history of science and it shows how war

torn Germany deeply impacted his life and work *Michigan Dairy Farmer; a Weekly Newspaper Devoted to the Dairy Interests of Michigan* G. H. Brownell, 1909

A Year of Marvellous Ways Sarah Winman, 2015-06-18 From the author of *STILL LIFE TIN MAN* and *WHEN GOD WAS A RABBIT* Will stand the test of time Irish Examiner Beautiful prose that ebbs and flows Independent A Year of Marvellous Ways is like Dylan Thomas given a sexy rewrite by Angela Carter Patrick Gale This is a story about Marvellous Ways an eighty nine year old woman who lives alone in a remote Cornish creek spending her days sitting by the river peering through a telescope And it s about Francis Drake a young soldier who washes up in her creek shattered by war and broken hearted It s about the magic in everyday life and the lure of the sea the healing powers of storytelling and sloe gin love and death and how we carry on when grief comes snapping at our heels

Sophomores and Other Oxymorons David Lubar, 2015-08-18 A hilarious follow up to the perennial favorite *Sleeping Freshmen Never Lie* Scott Hudson has somehow managed to survive Freshman year But with a new baby brother in the house and a whole host of adventures awaiting him at school Sophomore year promises to be anything but boring An honest and funny follow up to the popular *Sleeping Freshmen Never Lie* award winning author David Lubar pens a tale that perfectly captures the ridiculous tumultuous and sometimes heartbreaking truths about high school

Dance a While Anne M. Pittman, Marlys S. Waller, Cathy L. Dark, 2015-04-21 The Tenth Edition of *Dance a While* continues the 65 year legacy of a textbook that has proven to be the standard of all recreational dance resources The authors have poured decades of experience and knowledge onto its pages providing a wealth of direction on American square contra international and social dance Each chapter is packed with expertly written instruction coupled with clear and detailed diagrams and informative history to provide students with well rounded training on over 260 individual dances The book also contains a music CD to allow for convenience when practicing outside of the classroom helping to make it an invaluable resource for students of dance at all levels

Understanding Social Signals: How Do We Recognize the Intentions of Others? Sebastian Loth, Jan P. De Ruiter, 2016-05-30 Powerful and economic sensors such as high definition cameras and corresponding recognition software have become readily available e g for face and motion recognition However designing user interfaces for robots phones and computers that facilitate a seamless intuitive and apparently effortless communication as between humans is still highly challenging This has shifted the focus from developing ever faster and higher resolution sensors to interpreting available sensor data for understanding social signals and recognising users intentions Psychologists Ethnologists Linguists and Sociologists have investigated social behaviour in human human interaction But their findings are rarely applied in the human robot interaction domain Instead robot designers tend to rely on either proof of concept or machine learning based methods In proving the concept developers effectively demonstrate that users are able to adapt to robots deployed in the public space Typically an initial period of collecting human robot interaction data is used for identifying frequently occurring problems These are then addressed by adjusting the interaction policies on the basis of the collected data However the

updated policies are strongly biased by the initial design of the robot and might not reflect natural spontaneous user behaviour In the machine learning approach learning algorithms are used for finding a mapping between the sensor data space and a hypothesised or estimated set of intentions However this brute force approach ignores the possibility that some signals or modalities are superfluous or even disruptive in intention recognition Furthermore this method is very sensitive to peculiarities of the training data In sum both methods cannot reliably support natural interaction as they crucially depend on an accurate model of human intention recognition Therefore approaches to social robotics from engineers and computer scientists urgently have to be informed by studies of intention recognition in natural human human communication

Combining the investigation of natural human behaviour and the design of computer and robot interfaces can significantly improve the usability of modern technology For example robots will be easier to use by a broad public if they can interpret the social signals that users spontaneously produce for conveying their intentions anyway By correctly identifying and even anticipating the user s intention the user will perceive that the system truly understands her his needs Vice versa if a robot produces socially appropriate signals it will be easier for its users to understand the robot s intentions Furthermore studying natural behaviour as a basis for controlling robots and other devices results in greater robustness responsiveness and approachability Thus we welcome submissions that a investigate how relevant social signals can be identified in human behaviour b investigate the meaning of social signals in a specific context or task c identify the minimal set of intentions for describing a context or task d demonstrate how insights from the analysis of social behaviour can improve a robot s capabilities or e demonstrate how a robot can make itself more understandable to the user by producing more human like social signals
