data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making the structure of the sector or the internal life of the sector

Ratings and Rankings in Higher Education Jonas Thiel, 2022-06-07 This important work critically investigates the use of rating and ranking systems in higher education to show how they govern the academic population through the creation of competition and antagonism From social media to PISA and Rotten Tomatoes ratings and rankings exist everywhere in our daily lives Seemingly benign in practice they can structure and govern important parts of society including social interaction public health and economic rankings In this essential critique author Jonas Thiel sets out the case against these practices using the UK's higher education model to show how tools such as the National Student Surveys NSS instead divide the academic population to make it governable and controllable Instead of achieving its intended aim of improving teaching by forcing competition over student satisfaction Thiel shows that systems like the NSS have a profound and often negative impact upon how people and institutions understand themselves Drawing on the new materialist theory of Karen Barad Foucault's governmentality and Laclau's understanding of antagonism the book raises an urgent need to respond to these boundary drawing practices especially in light of rising inequality and ecological collapse and poses the question can we even imagine a world without Top 10 rankings and out of 5 scores Engaging with current debates around value tuition fees and the role of higher education in society this is fascinating reading for advanced students and academics in psychology education sociology and philosophy
