Linux Command Line 101 Kemal Demirez, 2021-02-13 There are many books written about Linux operating system so far, and it will continue to be. Each book is a unique method of expression and a path to follow. I, as a Linux lover, also wanted to say a few words in this field. My work is just about that. I stood on the issue of the using of Linux commands. Of course, there are many resources related to this issue, both printed and on the internet. I can say there are some differences in this book. What are those differences? For example, I chose simple explanation. I did not care too much with the details, which is to me unnecessary, and also could be exhaustive for user reader. Unnecessarily, I elaborate on more practice that will benefit command to use. I try to add images on the use of almost every command, and through a rigid categorization, I tried to explain that I deem necessary rather than being grouped in topics etc. Of course, all work can be done much better all the time. I wish to be helpful to all readers.

Mobile Security Products for Android Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013 more than 1 billion smartphones were sold, a further milestone in the advance of these devices.¹ A study published by Facebook emphasises the importance of smartphones in our lives: about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days the use of security software on a PC or laptop is seen as essential. However many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently many of today's security products contain not only malware protection but also highly developed theft protection functions which make the device less attractive to thieves, e.g. by locking the device and helping the owner to find it again. Engineering Optics 2.0 Xiangang Luo, 2019-02-28 This book provides comprehensive information on the history and status quo of a new research field which we refer to as Engineering Optics 2.0. The content covers both the theoretical basis and the engineering aspects in connection with various applications. The field of Engineering Optics employs optical theories to practical applications in a broad range of areas. However the foundation of traditional Engineering Optics was formed several hundred years ago and the field has developed only very gradually. With technological innovations in both the fabrication and characterization of microstructures, the past few decades have witnessed many groundbreaking changes to the bases of optics, including the generalizing of refraction, reflection, diffraction, radiation and absorption theories. These new theories enable us to break through the barriers in traditional optical technologies, yielding revolutionary advances in traditional optical systems such as microscopes, telescopes and lithography systems.
