

CHAPTER 23

Credit Derivatives

Practice Questions

Problem 23.8.

Suppose that the risk-free zero curve is flat at 7% per annum with continuous compounding and that defaults can occur half way through each year in a new five-year credit default swap. Suppose that the recovery rate is 30% and hazard rate is 3%. Estimate the credit default swap spread? Assume payments are made annually.

The table corresponding to Tables 23.2, giving unconditional default probabilities, is

<i>Time (years)</i>	<i>Probability of surviving to year end</i>	<i>Default Probability during year</i>
1	0.9704	0.0296
2	0.9418	0.0287
3	0.9139	0.0278
4	0.8869	0.0270
5	0.8607	0.0262

The table corresponding to Table 23.3, giving the present value of the expected regular payments (payment rate is s per year), is

<i>Time (yrs)</i>	<i>Probability of survival</i>	<i>Expected Payment</i>	<i>Discount Factor</i>	<i>PV of Expected Payment</i>
1	0.9704	$0.9704s$	0.9324	$0.9048s$
2	0.9418	$0.9418s$	0.8694	$0.8187s$
3	0.9139	$0.9139s$	0.8106	$0.7408s$

5	0.8607	$0.8607s$	0.7047	$0.6065s$
Total				$3.7412s$

The table corresponding to Table 23.4, giving the present value of the expected payoffs (notional principal = \$1), is

<i>Time (yrs)</i>	<i>Probability of default</i>	<i>Recovery Rate</i>	<i>Expected Payoff</i>	<i>Discount Factor</i>	<i>PV of Expected Payment</i>

Hull Chapter Solutions:

Constraint Reasoning for Differential Models Jorge Cruz, 2005 Focuses on the integration of ordinary differential equations within the interval constraints framework which for this purpose is extended with the formalism of Constraint Satisfaction Differential Problems Such a framework allows the specification of ordinary differential equations by means of constraints

Ultimate Limit State Analysis and Design of Plated Structures Jeom Kee Paik, 2018-03-02 Reviews and describes both the fundamental and practical design procedures for the ultimate limit state design of ductile steel plated structures The new edition of this well established reference reviews and describes both fundamentals and practical design procedures for steel plated structures The derivation of the basic mathematical expressions is presented together with a thorough discussion of the assumptions and the validity of the underlying expressions and solution methods Furthermore this book is also an easily accessed design tool which facilitates learning by applying the concepts of the limit states for practice using a set of computer programs which can be downloaded Ultimate Limit State Design of Steel Plated Structures provides expert guidance on mechanical model test results as well as nonlinear finite element solutions sophisticated design methodologies useful for practitioners in industries or research institutions and selected methods for accurate and efficient analyses of nonlinear behavior of steel plated structures both up to and after the ultimate strength is reached Covers recent advances and developments in the field Includes new topics on constitutive equations of steels test database associated with low elevated temperature and strain rates Includes a new chapter on a semi analytical method Supported by a companion website with illustrative example data sheets Provides results for existing mechanical model tests Offers a thorough discussion of assumptions and the validity of underlying expressions and solution methods Designed as both a textbook and a handy reference Ultimate Limit State Design of Steel Plated Structures Second Edition is well suited to teachers and university students who are approaching the limit state design technology of steel plated structures for the first time It also meets the needs of structural designers or researchers who are involved in civil marine and mechanical engineering as well as offshore engineering and naval architecture

Sensor Technologies for Civil Infrastructures Jerome P. Lynch, Hoon Sohn, Ming L. Wang, 2022-07-19 Sensor Technologies for Civil Infrastructure Volume 1 Sensing Hardware and Data Collection Methods for Performance Assessment Second Edition provides an overview of sensor hardware and its use in data collection The first chapters provide an introduction to sensing for structural performance assessment and health monitoring and an overview of commonly used sensors and their data acquisition systems Further chapters address different types of sensor including piezoelectric transducers fiber optic sensors acoustic emission sensors and electromagnetic sensors and the use of these sensors for assessing and monitoring civil infrastructures The new edition now includes chapters on machine learning methods and reliability analysis for structural health monitoring All chapters have been revised to include the latest advances in materials such as piezoelectric and mechanoluminescent materials technologies such as LIDAR and applications Describes

sensing hardware and data collection covering a variety of sensors including LIDAR Examines fiber optic systems acoustic emission piezoelectric sensors electromagnetic sensors terahertz technologies ultrasonic methods and radar and millimeter wave technology Covers strain gauges micro electro mechanical systems MEMS multifunctional materials and nanotechnology for sensing and vision based sensing and lasers Includes new chapters on machine learning methods and reliability analysis

Minimax Under Transportation Constrains Vladimir Tsurkov, A. Mironov, 2013-11-21 Transportation problems belong to the domains mathematical programming and operations research Transportation models are widely applied in various fields Numerous concrete problems for example assignment and distribution problems maximum flow problem etc are formulated as transportation problems Some efficient methods have been developed for solving transportation problems of various types This monograph is devoted to transportation problems with minimax criteria The classical linear transportation problem was posed several decades ago In this problem supply and demand points are given and it is required to minimize the transportation cost This statement paved the way for numerous extensions and generalizations In contrast to the original statement of the problem we consider a minimax rather than a minimum criterion In particular a matrix with the minimal largest element is sought in the class of nonnegative matrices with given sums of row and column elements In this case the idea behind the minimax criterion can be interpreted as follows Suppose that the shipment time from a supply point to a demand point is proportional to the amount to be shipped Then the minimax is the minimal time required to transport the total amount It is a common situation that the decision maker does not know the tariff coefficients In other situations they do not have any meaning at all and neither do nonlinear tariff objective functions In such cases the minimax interpretation leads to an effective solution

Calculus of Variations Filip Rindler, 2018-06-20 This textbook provides a comprehensive introduction to the classical and modern calculus of variations serving as a useful reference to advanced undergraduate and graduate students as well as researchers in the field Starting from ten motivational examples the book begins with the most important aspects of the classical theory including the Direct Method the Euler Lagrange equation Lagrange multipliers Noether's Theorem and some regularity theory Based on the efficient Young measure approach the author then discusses the vectorial theory of integral functionals including quasiconvexity polyconvexity and relaxation In the second part more recent material such as rigidity in differential inclusions microstructure convex integration singularities in measures functionals defined on functions of bounded variation BV and convergence for phase transitions and homogenization are explored While predominantly designed as a textbook for lecture courses on the calculus of variations this book can also serve as the basis for a reading seminar or as a companion for self study The reader is assumed to be familiar with basic vector analysis functional analysis Sobolev spaces and measure theory though most of the preliminaries are also recalled in the appendix

Parallel Combinatorial Optimization El-Ghazali Talbi,2006-12-13 This text provides an excellent balance of theory and application that enables you to deploy powerful algorithms frameworks and methodologies to solve complex optimization problems in a diverse range of industries Each chapter is written by leading experts in the fields of parallel and distributed optimization Collectively the contributions serve as a complete reference to the field of combinatorial optimization including details and findings of recent and ongoing investigations

Set-Valued, Convex, and Nonsmooth Analysis in Dynamics and Control Rafal K. Goebel,2024-06-26 Set valued analysis convex analysis and nonsmooth analysis are relatively modern branches of mathematical analysis that have become increasingly relevant in current control theory and control engineering literature This book serves as a broad introduction to analytical tools in these fields and to their applications in dynamical and control systems and is the first to cover these topics with this scope and at this level Both continuous time and discrete time multivalued dynamics modeled by differential and difference inclusions are considered Set Valued Convex and Nonsmooth Analysis in Dynamics and Control An Introduction is aimed at graduate students in control engineering and applied mathematics and researchers in control engineering who have no prior exposure to set valued convex and nonsmooth analysis The book will also be of interest to advanced undergraduate mathematics students and mathematicians with no prior exposure to the topic The expected mathematical background is a course on nonlinear differential equations dynamical systems and a course on real analysis Knowledge of some control theory is helpful but not essential
