

Human Blood Cell Typing

©Harvard Medical School 2009

Our organisms manufacture antibodies automatically to many molecules, proteins, and microorganisms. Among others, when foreign red-cell surface glycoproteins (antigens) are in the bloodstream they stimulate the immune system to manufacture antibodies against them. These antibodies (antibodies) are proteins that bind to the antigens and cause them to be removed from the body. The antibodies are called **anti** (against) because they bind to the antigens and cause them to be removed from the body.

Model 1 – Red Blood Cells and Antibodies

	Person with Blood Type A	Person with Blood Type B	Person with Blood Type AB	Person with Blood Type O
Cells with attached antigens				
Antibodies produced				
Cells in the presence of anti-A antibodies				
Cells in the presence of anti-B antibodies				

1. Blood types in the human population are characterized by the presence or absence of **antigens** on the surface of their red blood cells.

a. Use only the Model 1, body using blood types and blood in the human population.

b. Which blood is used in Model 1 to represent anti-A antibodies?

c. What relationship is type A and blood type B or type AB and blood type?

Human Blood Cell Typing Pogil Key
