Value Management in Healthcare Nathan William

Tierney, 2017-10-06 Nathan Tierney's powerful storytelling is rarely seen in today's health care business environment. We must redesign the health care delivery system; a team sport in service of patients holds it accountable with measurement to improve outcomes and quantify the resource costs over the full cycle of care. Value-based health care is a framework through which these goals are achieved, and Tierney provides a detailed playbook to get your organization there. Outlined in incredible detail and clarity, he presents core concepts and dives into the key metrics needed to build, maintain, and scale a successful value-based health care organization. Nathan shares a realistic vision of what any CEO should expect when developing their own Value Management Office. Nothing is more important to me than improving the lives of those I love. My personal mission is to create systemic change with an impact on the global stage. This playbook needs to be on the desk of every executive, clinician, and patient today.

Mahek Shah, MD, Senior Researcher and Senior Project Leader, Harvard Business School. Our current healthcare system is broken. The Organization for Economic Co-operation and Development (OECD) predicts health care costs could increase from 6% to 14% of GDP by 2060. The cause of this increase is due to: 1. a global aging population, 2. growing affluence, 3. rise in chronic diseases, and 4. better informed patients, all of which raises the demand for healthcare. In 2006, Michael Porter and Elizabeth Teisberg authored the book *Redefining Health Care: Creating Value-Based Competition on Results*. In it, they present their analysis of the root causes plaguing the health care industry and make the case for why providers, suppliers, consumers, and employers should move towards a patient-centric approach that optimizes value for patients. According to Porter, value for patients should be the overarching principle for our broken system. Since 2006, Professor Porter, accompanied by his esteemed Harvard colleague Professor Robert Kaplan, have worked tirelessly to promote this new approach and pilot it with leading healthcare delivery organizations like Cleveland Clinic, Mayo Clinic, MD Anderson, and U.S. Department of Veteran Affairs. Given the current state of global healthcare, there is urgency to achieve widespread adoption of this new approach. The intent of this book is to equip all healthcare delivery organizations with a guide for putting the value-based concept into practice. This book defines the practice of value-based health care as Value Management. The book explores Professor Porter's Value Equation: Value = Outcomes / Cost, which is central to Value Management and provides a step-by-step process for how to calculate the components of this equation. On the outcomes side, the book presents the Value Realization Framework, which translates organizational mission and strategy into a comprehensive set of performance measures and contextualizes the measures for healthcare delivery. The Value Realization Framework is based on Professor Kaplan's ground-breaking Balanced Scorecard approach but specific to healthcare organizations. On the costs side, the book details the Harvard-endorsed time-driven activity-based costing (TDABC) methodology, which has proven to be a modern catalyst for defining HDO costs. Finally, this book covers the need and a plan to establish a Value Management Office to lead the delivery transformation and govern operations. This book is designed in a format where any organization can read it and acquire the fundamentals and methodologies of Value Management. It is intended for healthcare delivery organizations in

The ITIL® v3 - Basics Anurag Thakur, 2018-11-15 Modern day IT Services and its subsequent businesses are going through a vast range of changes These are changes in either demand or the way technology is evolved in the day to day life IT Industry has been through the phases from business oriented units to end user oriented services If we look into the history of the IT industry then we do not need not go beyond the 20th century It was a UK government initiative that started one of the first frameworks to enhance capacities delivered by IT industry ITIL should be given credit for how the IT development work is conducted in today's scenario When the UK government implemented this framework in general IT practices the IT work was done for the end users but with a focus towards the businesses The enhancements in industry ensured that innovations are part of the industry but now the focus is moved from a phase to other Today a consumer holds the maximum power to influence biggest business decisions Until a few years ago the IT industry had a life that focussed on what requirements clients are looking to fulfill with Now clients have to sustain that trend and add a separate set that talks about their products end users Infrastructure as a Service IaaS Software as a Service SaaS Platform as a Service PaaS etc came to existence as these gave an idea to address end users expectations directly even when serving the client There are other project management frameworks that assist organisations developing their processes but ITIL has a unique advantage as it guides on not only setting up the process but to add a flavor of the service industry I am trying to put all my professional experiences and knowledge earned through the trainings in this book Wish you all a Happy Learning time
