- Top up oil through oil filler aperture (Fig. 11).
- The oil level is correct when it has reached the bottom edge of the filler hole and/or when oil is already escaping out of the filler hole.

Fig. 11

4.3 Oil Level Check

DANGER !

Too little oil in the transmission will result in transmission damage. Risk of accident!

Check the transmission oil level at regular intervals:

- Check oil level when vehicle is on horizontal ground.
- Do not undertake the oil level check right after travel (this will produce an incorrect measurement). Only undertake the check once the transmission oil has cooled down ($< 40^{\circ}\text{C}$).
- Unscrew and remove the oil filler plug (chapter 4.2.2).
- If the oil level has fallen below the oil filler hole, the oil must be topped up (refer to chapter 4.2.2).

NOTE

Whenever checking the oil level, also check the manual transmission for seal integrity.

constrain multi DOFs of the human body and can be defined at the kinematic muscular neural level have gained increasing attention as a general simplified approach to shape the development of simple and effective artificial devices The execution of such purposeful sensory motor primitives on the biological side leverages on the interplay of the sensory motor control at central and peripheral level and the interaction of the human body with the external world This interaction is particularly important considering the new concept of robotic soft manipulation i e soft adaptable yet robust robotic hands that can deform with the external environment to multiply their grasping and manipulation capabilities Under this regard a preeminent role is reserved to touch being that skin is our primary organ to shape our knowledge of the external world and hence to modify it in interaction with the efferent parts This Research Topic reports results on the mutual inspiration between neuroscience and robotics and on how it is possible to translate neuroscientific findings on human manipulation into engineering guidelines for simplified systems able to take full advantage from the interaction and hence exploitation of environmental constraints for task accomplishment and knowledge acquisition
