Research on Physics Education Edward F. Redish, Matilde Vicentini, Società italiana di fisica, 2004 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment **Matemáticas y representaciones del sistema natural** César Augusto Vázquez Peredo, 2012-02-11 El punto de vista del autor Matemáticas y representaciones del sistema natural es que analiza situaciones de la vida cotidiana en las cuales se presentan fenomenos menos relacionados con el comportamiento de los fluidos la electricidad el magnetismo el calor y las leyes de los gases mediante el uso de herramientas matemáticas como las relaciones y funciones que permiten comprenderlos y resolver problemas relacionados con los mismos desde diferentes enfoques *Revista portuguesa de filosofia*, 2005 *Universo natural* Aurelio Ramírez
