

Answer key:

CELL CITY INTRODUCTION!

Floating around in the cytoplasm are small structures called **organelles**. Like the organs in your own body, each one carries out a specific function necessary for the cell to survive. Imagine the cells as a miniature city. The organelles might represent companies, places, or parts of the city because they each have similar jobs.

Below are the descriptions of important parts of the Cell City:

<i>City Part</i>	<i>Function</i>	<i>Cell Part</i>
City Limits	Controls what goes in and out of the city	-cell membrane
Old Construction Building	Helps make constructions vehicles. Rough appearance.	-Rough endoplasmic reticulum
Private contractors	Contains special construction equipment for the city limits and taking out trash.	-Smooth endoplasmic reticulum
Roads	Define city boundaries and used for transportation.	-Microtubules
City Hall	Controls all the activities in of the city	-Nucleus
Parks, grass, trees	fills the space between structures in a city and gives a city its shape	-Cytoplasm
Construction Company	Builds construction vehicles for the city	-Ribosomes
Delivery Van	Delivers products made at the construction company to other locations in the city	Vesicle
Food Processing Plant	Processes large quantities of food entering the city into smaller packages that can be used more easily	-Lysosomes
Warehouse	Stores materials needed by the city	-Vacuole
Power Company	Produces energy for the city	-Mitochondria
Solar Power Plant	Uses the sun's energy to produce power for the city	-Chloroplast
Customization Shop	Changes and puts the finishing touches on vehicles.	Golgi Apparatus

As you move through this worksheet, **see if you can match the important parts of the city listed above to the specific organelles found in cells. Be sure to write neatly, and in complete sentences.**
