Imagine Math 8 Michele Emmer, Marco Abate, 2022-09-07 This eighth volume of *Imagine Math* is different from all the previous ones. The reason is very clear: in the last two years, the world changed and we still do not know what the world of tomorrow will look like. Difficult to make predictions. This volume has a subtitle: *Dreaming Venice*. Venice, the dream city of dreams, that miraculous image of a city on water that resisted for hundreds of years, has become in the last two years truly unreachable. Many things tie this book to the previous ones. Once again, this volume also starts like *Imagine Math 7* with a homage to the Italian artist Mimmo Paladino, who created exclusively for the *Imagine Math 8* volume a new series of ten original and unique works of art dedicated to Piero della Francesca. Many artists, art historians, designers and musicians are involved in the new book, including Linda D Henderson and Marco Pierini, Claudio Ambrosini and Davide Amodio. Space also for comics and mathematics in a Disney key. Many applications from Origami to mathematical models for world hunger. Particular attention to classical and modern architecture with Tullia Iori. As usual, the topics are treated in a way that is rigorous but captivating, detailed and full of evocations. This is an all-embracing look at the world of mathematics and culture.

[Resources in Education](#), 2001-10 *Maths for Social Sciences* Lorenzo Peccati, Mauro D'Amico, Margherita Cigola, 2018-12-28 This book is aimed at students in social sciences programs that include some course in quantitative methods. Stats for social sciences is frequently the subject of textbooks, while maths for social sciences is often neglected. Monographs on specific themes like, for instance, social choice systems or game theory applications are available, but they do not adequately cover the topic in general. This textbook stems from the Bocconi University's new Bachelor in Government, which was launched in 2015 and is intended for undergraduate students who do not exclude maths from their toolbox. It discusses various concrete applications in political economics, political science, sociology and demography and explores topics like Grexit, Macron's success, immigration effects and the Arab Spring.
