such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility even though their devices store personal data, private photos, Internet banking information, or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection but also highly developed theft protection functions which make the device less attractive to thieves, e.g. by locking the device and helping the owner to find it again.
