Galea,Corinna Darian-Smith,Michio Sugitani,Andrew Tan,Kathleen Burman,2012-12-06 1 1 Purpose and Plan of This Review This review is focused on the topography and connections of some of the neuron populations that determine the manual dexterity of the macaque monkey The populations selected for examination are the following 1 The corticospinal neuron populations 2 The thalamocortical and corticothalamic neuron populations associated with the sensorimotor cortex 3 The ipsilateral cortical connections of the sensorimotor cortex These neuron populations have

been chosen because of their obvious relevance to the directed intelligent use of the hands but also because of their anatomical and functional interdependence. Corticospinal neuron populations transmit a complex orchestrated output from a number of different regions of cerebral cortex to the neuron populations in every segment of the spinal cord and this output includes the command information defining the intended manual action. The thalamocortical complex is especially concerned with the transmission and modulation or filtering of a visual tactile proprioceptive vestibular and auditory information to the cerebral cortex and information from the cerebellum, basal ganglia, limbic system and brain stem which is relevant to sensorimotor behavior. Finally, the extensive ipsilateral cortical connections constitute a major part of the supraspinal circuitry which coordinates the contributions of all the cortical neuron populations contributing to intelligent sensorimotor behavior and in particular transmits the cross talk between those cortical neuron populations which shape and control the dextrous handling of objects within reach.

The Science and Clinical Application of Manual Therapy Hollis H. King, Wilfrid Jänig, Michael M. Patterson, 2010-09-18. The Science and Clinical Application of Manual Therapy is a multidisciplinary international reference book based on work by the top basic science researchers and clinical researchers in the area of Manual Therapy and Manual Medicine (MT/MM). The first book to bring together research on the benefits of MT/MM beyond the known effects on musculoskeletal disorders, the volume presents evidence of the benefit of MT/MM in treating systemic disorders. This book makes a powerful case for how MT/MM affects the central nervous system and the autonomic effector systems: the circulatory, respiratory, gastrointestinal systems and pelvic organs which impact on a person's health. The volume covers how MT/MM works and details the conditions such as chronic skeletal and visceral pain, diseases, asthma, pneumonia and cardiovascular deregulation that can benefit from it. Longstanding theoretical models of MT/MM mechanisms are critically assessed in the light of current understanding of physiological and neurophysiological function and the influences of psychological and cortical processes on the effects of MT/MM are explored. The book, which is divided into four main sections, will appeal to osteopathic physicians, osteopaths, chiropractors, physical therapists and massage therapists as well as all body workers, health practitioners who use their hands in health care. It will be of particular value to all practitioners involved in treatment of chronic pain disorders as well as those involved in basic and clinical research in this field. Authored by the leading multidisciplinary basic science and clinical researchers from throughout the world, it describes research confirming benefit of MT for musculoskeletal disorders which helps provide a rationale for greater utilization of manual therapy and reimbursement for this healthcare service. It presents the latest findings on the beneficial effect of MT on systemic disorders including asthma, pneumonia, otitis media, heart rate dysfunction and GI disturbance. It critically assesses longstanding theoretical models of MT/MM mechanisms with respect to the current understanding of physiological and neurophysiological function. It explores the influences of psychological and cortical processes on the effects of MT/MM including the effect of placebo. Uniquely, it presents research findings from all the manual therapy professions and scientists.
