Biosurfactants are structurally diverse group of bioactive molecules produced by a variety of microorganisms They are secondary metabolites that accumulate at interfaces reduce surface tension and form micellar aggregates This research topic describes few novel microbial strains with a focus on increasing our understanding of genetics physiology regulation of biosurfactant production and their commercial potentials A major stumbling block in the commercialization of biosurfactants is their high cost of production Many factors play a significant role in making the process cost effective and the most important one being the use of low cost substrates such as agricultural residues for the production of biosurfactants With the stringent government regulations coming into effect in favor of production and usage of the bio based surfactants many new companies aim to commercialize technologies used for the production of biosurfactants and to bring down costs This Research Topic covers a compilation of original research articles reviews and research commentary submitted by researchers enthusiastically working in the field of biosurfactants and highlights recent advances in our knowledge of the biosurfactants and understanding of the biochemical and molecular mechanisms involved in their production scale up and industrial applications Apart from their diverse applications in the field of bioremediation enhanced oil recovery cosmetic food and medical industries biosurfactants can also boast off their unique eco friendly nature to attract consumers and give the chemical surfactants a tough competition in the global market This biosurfactant focused research topic aims to summarize the current achievements and explore the direction of development for the future generation of biosurfactants and bioemulsifiers Some of the biosurfactant optimization processes presented are well structured and already have a well established research community We wish to stimulate on going discussions at the level of the biosurfactant production including common challenges in the process development novel organisms and new feedstock and technologies for maximum benefit key features of next generation biosurfactants and bioemulsifiers We have compiled the research outputs of international leaders in the field of biosurfactant particularly on the development of a state of the art and highly efficient

Introduction to Green Chemistry John Andraos, Albert S. Matlack, 2022-03-09 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluororous biphasic catalysis, metal-organic frameworks, and process intensification, which were barely mentioned in the First Edition, have become major areas of research. In addition, government funding has ramped up the development of fuel cells and biofuels. This reflects the evolving focus from pollution remediation to pollution prevention. Copiously illustrated with more than 800 figures, the Third Edition provides an update from the frontiers of the field. It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter. Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry.

NEW AND EXPANDED RESEARCH TOPICS Metal-organic frameworks, Metrics, Solid acids for alkylation of isobutene by butanes, Carbon molecular sieves, Mixed micro- and mesoporous solids, Organocatalysis, Process intensification and gas-phase enzymatic reactions, Hydrogen storage for fuel cells, Reactive distillation, Catalysts in action on an atomic scale.

UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry, Nuclear power, Removal of mercury from vaccines, Removal of mercury and lead from primary explosives, Biofuels, Uses for surplus glycerol, New hard

materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society
