EPA National Publications Catalog United States. Environmental Protection Agency, 2003 **Resource Publication**
, 1987 **Human Values and Biodiversity Conservation** Clement A. Tisdell, 2014-08-01 This pioneering book explores the influence of human values on the willingness of individuals to pay for the conservation of individual wildlife species and classes of these to be for or against their survival and to favour or oppose their harvesting **Nature's Ghosts** Mark V. Barrow, 2024-05-31 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature's Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson's day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them *Nature's Ghosts* offers an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead *Mocking Bird Technologies* Christopher GoGwilt, Melanie D. represent the climate catastrophe so that their works stir audiences to political action or at least raise their environmental awareness without however appearing didactic Storying the Ecocatastrophe attempts to answer this question while interrogating the potential of narrative to become a viable political force The collection of essays achieves this by examining the representational strategies and ideological goals of contemporary cultural productions about climate change These productions have been created across different genres such as the traditional novel dance performance solarpunk economic report collage and space opera as well as across different languages and cultures The volume s twelve chapters demonstrate that rising temperatures erratic weather extinction of species depletion of resources and coastal erosion and flooding are an effect of our abusive relationship with nature They also show that our use of nuclear power extraction of natural resources and extensive farming including heavy reliance on pesticides intersect with intrahuman violence as fleshed out by heteropatriarchy racism neo colonialism and capitalism They finally argue that human activity has indirectly contributed to other contemporary crises namely the migrant crisis and the spread of contagious diseases such as Covid 19 Chapter 8 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license *In Defense of the World s Most Despised Species*

Ernest Small, 2023-10-05 Some animals and plants injure or kill millions of people annually others cause trillions of dollars in property damage and loss Such harmful species are understandably hated However the vast majority of the planet s millions of species are disliked simply because of how they look and act This bias is endangering numerous species that play important roles in maintaining both the natural ecosystems and the human economies of the world In Defense of the World s Most Despised Species examines the psychological motivations that lead people to make judgments about the attractiveness of species noting the overwhelming importance of visual cues It describes in considerable detail the physical and behavioral traits of species that lead us to love or hate them Full color illustrations throughout present beautiful charming animals and plants species that seem loathsome behavior of people in relation to such divergent species and their characteristics and numerous explanatory diagrams of relevant biological and psychological phenomena The aim of this book is to give readers

insights into how we humans arrive at biased judgments and to promote the welfare of valuable albeit sometimes unlovable animals and plants that consequently suffer from discrimination Many of the ugliest most disgusting and feared species such as vultures toads hyenas sharks spiders and even the vast majority of cockroaches in reality are some of our most valuable friends Features Theme of the book human preferences for and against species is novel scarcely examined to date Multidisciplinary analysis especially psychology biological conservation science and ecology as well as philosophy agriculture urban planning human health and law Text is accessible user friendly concise and well organized making numerous complex topics comprehensible readable not only by specialists but also by students and the educated layperson Includes over 2 000 high quality entertaining and informative color figures
