Exploring Biology in the Laboratory: Core Concepts Murray P. Pendarvis, John L. Crawley, 2019-02-01 Exploring Biology in the Laboratory Core Concepts is a comprehensive manual appropriate for introductory biology lab courses This edition is designed for courses populated by nonmajors or for majors courses where abbreviated coverage is desired Based on the two semester version of Exploring Biology in the Laboratory 3e this Core Concepts edition features a streamlined set of clearly written activities with abbreviated coverage of the biodiversity of life These exercises emphasize the unity of all living things and the evolutionary forces that have resulted in and continue to act on the diversity that we see around us today

Organic Chemistry of Isotopic Labelling James R Hanson, 2019-04-05 The chemical synthesis of isotopically labelled compounds is a pre requisite for many chemical biochemical and medicinal investigations The constraints imposed by the requirements for regiospecific labelling and in some instances the time scale of the synthesis often lead to quite different synthetic strategies to those that are used for the unlabelled material Whilst there are many specialist papers reviews and long books devoted to particular isotopes there is no currently available short introductory book devoted to the organic chemistry of isotopic labelling The aim of this book is to introduce research workers to a variety of methods that have been used to achieve these synthetic labelling objectives before exploring a particular method in detail It covers a number of different isotopes and the methods that have been used to introduce them into organic compounds Labelling methods also provide useful undergraduate teaching examples of modern synthetic reactions and their stereochemical consequences using relatively simple substrates The book will therefore have a wider appeal than just those involved in using isotopes in research such as environmental and pharmaceutical chemists as well as organic chemists
