ENDOCRINE SYSTEM WEBQUEST

Background:

The endocrine system is a complex network of glands, hormones and receptors. It provides the key communication and control link between the nervous system and bodily functions such as reproduction, immunity, metabolism and behavior.

In nearly all complex multicellular animals, there are two main systems controlling and coordinating the processes within the body:

- The nervous system, which exerts rapid point-to-point control by means of electrical signals passing down the nerves to particular organs or tissues.
- The endocrine system, which is a slower system based on chemical messengers, the hormones, which are secreted into the blood (or other extracellular fluids) and can reach all parts of the body.

The nervous system works in tandem with the endocrine system to control all bodily functions and processes.

Your mission: Become familiar with the endocrine system, how it relates to the nervous system and the result of this interaction on the body.
