Features marked with an asterisk (\*) are available only on units manufactured after January 1993 (revision 1.3).

### 1. Mechanical installation

- Prepare panel cutout.
- Install the optional front panel gasket (part no. BG-133 2007) if required. Remove the backing from the gasket and apply it around the panel cutout on the outside of the panel.
- Slide instrument sleeve into the cutout from the front of the panel.
- Position the mounting bracket on the side of the instrument sleeve with the 2 clips facing the rear and positioned on the top and bottom of the sleeve.
- While holding the sleeve, slide the mounting bracket towards the panel until the clips engage on the notches. While still pulling back on the sleeve, press on the upper left and lower right hand corners of the bracket to seat the mounting bracket. Another push on the clips

### 2. Electrical connections

**WARNING:** Ensure that the maximum voltage which is applied to the unit power supply, between any two isolated circuits, or between any isolated circuit and ground does not exceed 254V<sub>ac</sub>.

**Power**  
Respect the polarity of the AC power supply: line wire must be connected to terminal 12, and the neutral must be connected to terminal 11.

**Alarm relay(s)**  
The alarm outputs are fail-safe: the relays are de-energized during the alarm condition or power down. The attached alarm circuit should be designed for fail-safe operation and fused appropriately. A snubber may be required; see below.

**Snubbers**  
Connect snubbers C2 140-386 (22mF ± 10%) across the appropriate alarm relay contacts when driving AC inductive loads (mechanical contactors and solenoids). Do not use snubbers when driving high impedance loads. The snubber passes 1 mA in 120V<sub>ac</sub> circuits, and 2mA in 240V<sub>ac</sub> circuits; this is sufficient to hold in certain relays with high impedance coils and should not be used in such installations.

**WARNING:** When an alarm contact is to be implemented as part of a failsafe alarm scheme, it is the user's responsibility to verify that the effect of the snubber does not interfere with the operation of the circuit. Certain high impedance circuits are not able to detect a contact opening when the snubber is placed across the contact. In these cases the snubber should not be installed across the relay contact.

**Reset input**  
Connect momentary contact, normally open pushbutton to terminals 6 and 7. Keep wiring run shorter than 3' (1 m) and well away from noise generating circuits.

**Input**  
**WARNING:** This temperature limit switch must have its own input sensor. Never connect the input terminals 9 and 10 in parallel with the input of any other instrument, e.g. recorder, controller, etc. The paralleled inputs of other instruments interfere with proper operation of the sensor break detection circuitry and may also impair the measurement accuracy.  
**NOTE:** The input circuit is NOT isolated from the reset input (terminals 6 and 7).  
Use of shunted, isolated pair is
