 Banff Canada from May 18 to May 31 1984 This conference was supported by grants from the N A T O Advanced Study
 Institute programme the Natural Sciences and Engineering Research Council of Canada and the University of Calgary We are
 grateful for all of this considerable support Almost fifty years ago the first Symposium on Lattice Theory was held in
 Charlottesville U S A On that occasion the principal lectures were delivered by G Birkhoff O Ore and M H Stone In those days
 the theory of ordered sets was thought to be a vigorous relative of group theory Some twenty five years ago the Symposium
 on Partially Ordered Sets and Lattice Theory was held in Monterey U S A Among the principal speakers at that meeting were

R P Dilworth B Jonsson A Tarski and G Birkhoff Lattice theory had turned inward it was concerned primarily with problems about lattices themselves As a matter of fact the problems that were then posed have by now in many instances been completely solved **Resources in Education** ,1984 **Revival: Numerical Solution Of Convection-Diffusion**

Problems (1996) K.W. Morton,2019-02-25 Accurate modeling of the interaction between convective and diffusive processes is one of the most common challenges in the numerical approximation of partial differential equations This is partly due to the fact that numerical algorithms and the techniques used for their analysis tend to be very different in the two limiting cases of elliptic and hyperbolic equations Many different ideas and approaches have been proposed in widely differing contexts to resolve the difficulties of exponential fitting compact differencing number upwinding artificial viscosity streamline diffusion Petrov Galerkin and evolution Galerkin being some examples from the main fields of finite difference and finite element methods The main aim of this volume is to draw together all these ideas and see how they overlap and differ The reader is provided with a useful and wide ranging source of algorithmic concepts and techniques of analysis The material presented has been drawn both from theoretically oriented literature on finite differences finite volume and finite element methods and also from accounts of practical large scale computing particularly in the field of computational fluid dynamics
