Kershner, 1965 USAF Flight Test Engineering Manual United States Air Force, Russel M. Herrington, Paul Shoemaker, 2008

In the late 1940s and early 50s planes flew higher and faster than anyone had dreamed possible. The jet age had arrived and along with it came turbojet and rocket powered aircraft capable of flying beyond the speed of sound. To assess these aircraft the Air Research and Development Command developed a series of data reduction methods and then compiled them in this Flight Test Engineering Manual. It served as a standard technical reference for the flight test engineers, program managers, pilots and support teams for many of the X plane programs of the 1950s. This reprint represents the first time in over fifty years that this book has been available and the first time it has ever been made available to the public. It is a unique time capsule that provides insight into the era of The Right Stuff when slide rules and punch cards were the cutting edge and a must have for anyone interested in the technical aspects of flight test.

Amateur-Built Aircraft and Ultralight Flight Testing Handbook U. S. Department of Transportation, Federal Aviation Administration, 2013-06-11. This advisory circular AC sets forth suggestions and safety related recommendations to assist amateur and ultralight builders in developing individualized aircraft flight test plans. The Federal Aviation Administration (FAA), the Experimental Aircraft Association (EAA) and the United States Ultralight Association (USUA) are concerned and committed to improving the safety record of amateur built and ultralight aircraft. The FAA Administrator T. Allen McArtor and EAA President Paul H. Poberezny signed a Memorandum of Agreement on August 1, 1988 which addressed the need for educational and safety programs to assist amateur builders in test flying their aircraft. In accordance with that agreement this AC provides guidelines for flight testing amateur built aircraft. As part of the FAA's continuing efforts to improve the safety record of all types of general aviation aircraft this AC has been revised to include flight testing recommendations for canard type and ultralight aircraft. This AC's purpose is the following:

- 1 To make amateur built ultralight aircraft pilots aware that test flying an aircraft is a critical undertaking which should be approached with thorough planning skill and common sense.
- 2 To provide recommendations and suggestions that can be combined with other sources on test flying e.g. the aircraft plan kit manufacturer's flight testing instructions, other flight testing data. This will

assist the amateur ultralight owner to develop a detailed flight test plan tailored for their aircraft and resources The flight test plan is the heart of all professional flight testing The plan should account for every hour spent in the flight test phase and should be adhered to with the same respect for the unknown that all successful test pilots share The time allotted for each phase of a personalized flight test plan may vary and each phase may have more events or checks than suggested in this AC The goals however should be the same The two goals for an amateur builder ultralight owner should be as follows 1 At the end of the aircraft s flight test phase the aircraft will have been adequately tested and found airworthy and safe to operate within its established operational envelope 2 Incorporation of the flight test operational and performance data into the aircraft s flight manual so the pilot can reference the data prior to each flight
