Floor Plan Using Geometry Terms:

The Fractal Dimension of Architecture Michael J. Ostwald, Josephine Vaughan, 2016-09-01 Fractal analysis is a method for measuring analysing and comparing the formal or geometric properties of complex objects In this book it is used to investigate eighty five buildings that have been designed by some of the twentieth century s most respected and celebrated architects Including designs by Le Corbusier Eileen Gray Frank Lloyd Wright Robert Venturi Frank Gehry Peter Eisenman Richard Meier and Kazuyo Sejima amongst others this book uses mathematics to analyse arguments and theories about some of the world s most famous designs Starting with 625 reconstructed architectural plans and elevations and including more than 200 specially prepared views of famous buildings this book presents the results of the largest mathematical study ever undertaken into architectural design and the largest single application of fractal analysis presented in any field The data derived from this study is used to test three overarching hypotheses about social stylistic and personal trends in design along with five celebrated arguments about twentieth century architecture Through this process the book offers a unique mathematical insight into the history and theory of design

InnovatiON-Architecture Eduardo Gutiérrez, Jordi Fernández, 2022-01-26 Compiles ON A work philosophy a constant search for innovative ad hoc solutions for each project using the most updated technologies and design research This book exposes and collects the innovations developed through 15 years of work at ON A through lengthy conversations between its founders and directors Eduardo Gutiérrez and Jordi Fernández and the editor This is not a usual monograph but rather an exploration of ideas from an innovation point of view according to four basic criteria Design Laboratory Technology and Emotion With the aim of understanding the different degrees of innovation on how they operate in ON A the book is organized into these four blocks The first one is routed on Design as a starting point to attend the control of the geometry inspired on mineral arboreal and organic shapes and encoding the information using parametric design BIM and coding techniques That methodology allows us to visualize and interact with the continuum of data and workflows of all stages of development attending to the entire life cycle of the project Since ON A considers themselves as a Laboratory rather than as a professional architecture office the second conversation explores our ways of making innovative architecture throughout bioclimatic and sustainable experiments and tests done in their works and projects In that chapter they talk about how to incorporate the green feature through bioarchitecture a layer of technological green that appeals to sustainability from materiality management and maintenance in

order to re naturalize cities and reconnect people with the natural environment in favor of an ecosystem balance Technology is the third chapter a key tool to enhance design and creativity carrying out complete material structural and installation modeling that gives us control of any layout whether we use curved glass precast GRC wood or another innovative material technique to build their projects Last but not least the fourth conversation is about how ON A s projects work as a catalyst for creating positive Emotions physical visual well being and comfort that contribute occupants health and flexible usability of the designed spaces As a result of these four conversations the book shows how to innovate in architecture from different layers with only one concern helping to reduce the environmental impact of human intervention improving citizens quality of life and seeking the emotional interactions between the inhabitants and their environment **English for Planning and**
