

But since then, what have these police robots done? And is Dubai's love affair with robotics nothing more than just a desire to spend money to have modern technology everywhere? PAL Robotics, the company behind the robot, talked a little bit about its **duties**, which seemed more tourist guide than police officer. "This robot joined the Dubai police to help citizens in an innovative and attractive way, and it is located by now in tourist attractions and shopping malls," the company told the BBC.

The robot can provide useful information in multiple languages thanks to **its** software and can also guide people to a requested point of interest. Besides, it is a tool for citizens to contact the Dubai Police call centers by using the microphones integrated into the robot. Additionally, people can use other police-related services through it, such as paying traffic fines.

The robot is part of a wider move to make the region's police service "smarter", which will include many more computer-controlled, **unmanned** police stations. The Dubai government wants robot police to make up 25% of the force by 2030. As a member of the Dubai police told the BBC when it was launched: "These kinds of robots can work 24/7. They won't ask you for leave, sick leave or maternity leave as they will be on duty all the time."

Noel Sharkey, a professor of computer science at Sheffield University has worked with the Dubai government on its integration of bots, says that these robots were originally planned in Dubai to help the elderly or as tour guides. However, he is not convinced by the current policing role. "I think there was a plan to have an emergency button, which would send your location to the police, and that could be a good application, but people could just make fun of them or knock them over." In fact, there is precedent for this. In July 2017, a security robot used to patrol an office building in Washington was found "drowned" in a fountain.

While police robots might currently be rudimentary, Prof Sharkey predicts they will become "more intense" in coming years, taking on the role of surveillance bots or as machines to discover explosives or other dangerous materials on the streets.
