- 1 There are basically two markets in equity securities. The first is the primary market. This market involves the issue of new securities whether they are initial public offers or further issues. The secondary market allows the purchase and sale of existing securities. The Australian Stock Exchange (ASX) is a centralised body, which provides a secondary market, facilitating trade in corporate and some government and semi-government financial assets. Ordinary shares of publicly listed corporations are the best known assets traded on the ASX though corporate, government and semi-government debt is also traded.
- 2 The two most common types of trades on the ASX system are market orders and limit orders. Market orders are to buy or sell a security at the prevailing price whereas limit orders specify the price to be traded.
- 3 Trading is conducted on either of two systems: ASX (based on the stock exchange system) and ASX 24 (based on the futures market system). ASX permits automated order processing
