**Assessing The E-Government Development Performance of Southeast Asian Countries (Based on the 2003- 2016 UN E-Government Survey)** Chiara Anindya, Anang Dwi Santoso, Yusra Purnamasari, Bimasakti Bhakti K., Ajeng Silvyanti, 2024-10-09 In the Information Age we live in governments around the world are provided with a variety of tools to aid their practices. Traditionally deemed as a bureaucratic practice, the incorporation of information and communications technologies (ICTs) allows governments to easily share public information. E-government allows citizens to claim an active role in the governing process. The practice of e-government is also seen to be more cost efficient as the government can reach its citizens in just a click. Naturally, e-government will continue to develop adjacent to the development of technology itself. In 2001 the United Nations (UN) started an exhaustive attempt to measure the global practice of e-government. The series of surveys began with an eighty-one page report titled *Benchmarking E-Government: A Global Perspective*. These surveys would later be known as the UN E-Government Survey. As stated in their 2003 publication, information technology applications, especially e-government programs, are increasingly becoming the cornerstone of government operations. p. 4 One of the primary outcomes of the first UN E-Government Survey was the E-Government Readiness Index, a treasured instrument the UN would later use in their subsequent research projects. Until December 2016, the UN has released nine survey reports on global e-government. The reports were published respectively in 2001, 2003, 2004, 2005, 2008, 2010, 2012, 2014, and 2016. However, the 2001 issue was not included as data for this monograph as it remains to only be an early effort in benchmarking the global progress of e-government. Each report addresses specific issues such as e-inclusion, sustainable development, connected governance, etc. The world rank of e-government practice measured by the E-Government Development Index (EGDI) is included in each report. The EGDI was developed using the same components of the E-Government Readiness Index but differs in the number of questions. Although the report doesn't address the thorough practice of e-government in all countries, it offers insight on the global, regional, and sub-regional digital government trends. Naturally, American and European countries appear frequently on the survey's top ranks. However, some Asian countries were starting to claim their place amongst the world's best e-government practices, with the Republic of Korea being the best worldwide in 2010, 2012, and 2014.

Concepts in the Brain David Kemmerer, 2019-02-21 For most native speakers of English the meanings of ordinary words like blue cup stumble and carve seem quite natural and self evident It turns out however that they are far from universal as shown by recent research in the discipline known as semantic typology To be sure the roughly 6 500 languages around the world do have many similarities in the sorts of concepts they encode But they also vary greatly in numerous ways such as how they partition particular conceptual domains how they map those domains onto syntactic categories which distinctions they force speakers to habitually attend to and how deeply they weave certain notions into the fabric of their grammar Although these insights from semantic typology have had a major impact on the field of psycholinguistics they have been mostly neglected by the branch of cognitive neuroscience that studies how concepts are represented organized and processed in our brains In Concepts in the Brain David Kemmerer exposes this oversight and demonstrates its significance He argues that as research on the neural substrates of semantic knowledge moves forward it should to the extent possible expand its purview to embrace the broad spectrum of cross linguistic variation in the lexical and grammatical representation of meaning Otherwise it will never be able to achieve a truly comprehensive pan human account of the cortical underpinnings of concepts Richly illustrated and written in an accessible interdisciplinary style the book begins by elaborating the different perspectives on concepts that currently exist in the parallel fields of semantic typology and cognitive neuroscience It then shows how a synthesis of these approaches can lead to a more unified and inclusive understanding of several domains of concrete meaning specifically objects actions and spatial relations Finally it explores a number of intriguing and controversial issues involving the interplay between language cognition and consciousness
