Surveying for Civil and Mine Engineers John Walker, Joseph L. Awange, 2017-08-04 Indeed the most important part of engineering work and also of other scientific work is the determination of the method of attacking the problem whatever it may be whether an experimental investigation or a theoretical calculation It is by the choice of a suitable method of attack that intricate problems are reduced to simple phenomena and then easily solved Charles Proteus Steinmetz The structure of

this book is to provide a sequence of theory workshops and practical field sessions that mimic a simple survey project designed for civil and mining engineers The format of the book is based on a number of years of experience gained in presenting the course at undergraduate and post graduate levels The course is designed to guide engineers through survey tasks that the engineering industry feels is necessary for them to have a demonstrated competency in surveying techniques data gathering and reduction and report presentation The course is not designed to make engineers become surveyors It is designed to allow an appreciation of the civil and mine engineering surveyor's job There are many excellent text books available on the subject of engineering surveying but they address the surveyor not the engineer Hopefully this book will distil many parts of the standard text book A lot of the material presented is scattered through very disparate sources and has been gathered into this book to show what techniques lie behind a surveyor's repertoire of observational and computational skills and provide an understanding of the decisions made in terms of the presentation of results The course has been designed to run over about 6 weeks of a semester providing a half unit load which complements a computer aided design CAD based design project

Information Technology in Geo-engineering D. G. Toll, Hehua Zhu, Xiaojun Li, 2010. Information technology (IT) is now intrinsic to many aspects of our lives and this is no less so for the field of geo engineering where it is widely used. This volume presents the proceedings of the First International Conference on Information Technology in Geo Engineering in Shanghai, September 2010. The conference brought together engineers, scientists, researchers and educators to review new developments and IT advances in geo engineering and provided a forum for the discussion of future trends. Information technology evolves constantly and the innovative concepts, strategies and technologies which have sprung up are becoming ever more important to all aspects of geo engineering, facilitating design processes, improving construction efficiency and lowering maintenance costs. These topics are among the many addressed here. Of interest to all those involved in the field of geo engineering, it is hoped that this volume will prove to be the first of a series to cover regular international conferences on this increasingly important subject.
