Engineering Surveying W Schofield, Mark Breach, 2007-02-14 Engineering surveying involves determining the position of natural and man made features on or beneath the Earth's surface and utilizing these features in the planning design and construction of works. It is a critical part of any engineering project. Without an accurate understanding of the size, shape and nature of the site, the project risks expensive and time consuming errors or even catastrophic failure. This fully updated sixth edition of Engineering Surveying covers all the basic principles and practice of the fundamentals such as vertical control, distance, angles and position, right through to the most modern technologies. It includes an introduction to geodesy to facilitate greater understanding of satellite systems. A fully updated chapter on GPS, GLONASS and GALILEO for satellite positioning in surveying. All new chapter on the important subject of rigorous estimation of control coordinates. Detailed material on mass data methods of photogrammetry and laser scanning and the role of inertial technology in them. With many worked examples and illustrations of tools and techniques, it suits students and professionals alike involved in surveying civil structural and mining engineering and related areas such as geography and mapping.

A Wayside Shrine in Northern Moab: Excavations in the Wadi ath-Thamad P. M. Michele Daviau, Margreet L. Steiner, 2017-08-31 Major recent excavations have shed much light on the complexity of Iron Age society and religion in southern Palestine, a region where both Judeans and Edomites lived. However, it is not clear whether the religious practices attested at these sites were a reflection of localised customs or were common rituals for peoples of Cisjordan and we do not know their extent. An isolated shrine site at Wadi ath-Thamad, Site WT 13 in northern Moab, which contained numerous finds of Iron Age figurines and statues, has been the subject of detailed excavation. The rich harvest of figurines, ceramic statues, beads, miniature ceramic vessels, architectural models, faunal remains and shells and fossils constitutes the evidence for repeated cultic activities. Although dating to the Iron Age, at the time of the consolidation of the kingdom of Moab, there is insufficient evidence at present to determine the full range of cultic practices and deities venerated by the peoples of the lands within ancient Moab and by those visitors to the shrine. The links between WT 13 and the surrounding town sites are only now coming to light with excavation at Atarus and Khirbat al-Mudayna as well as at the Ammonite site of Tall Damiyah in the Jordan Valley, where a comparable shrine has recently been uncovered. WT 13 clearly serves as a link between the Jordan Valley and the Negev, adding to our knowledge of local and foreign influences in the region during the Iron Age.
